Acknowledgments:

Special thanks to the Global Green Growth Institute (GGGI) and the Colombian Stock Exchange (Bolsa de Valores de Colombia bvc) for their valuable technical support for the development of this Framework for Green, City District.

This framework was carried out with technical assistance from the European Union under the Global Green Bond Initiative (GGBI) and implemented by GGGI. The GGBI is a flagship initiative of the EU within the Global Gateway strategy and, in Latin America and the Caribbean, contributes to the EU-LAC Global Gateway Investment Agenda.

SECTION 1

**COMMITMENT OF THE
COUNTRY AND BOGOTA
D.C. TO ENCOURAGE
SUSTAINABLE
DEVELOPMENT**

1. SUSTAINABLE DEVELOPMENT IN COLOMBIA

Colombia’s environmental regulatory framework reflects a strong commitment to the protection of biodiversity, ecosystems and their ecosystem services, as well as the promotion of sustainable practices. Articles 79 and 80 of the Colombian Constitution establish the right of people to enjoy a healthy and balanced environment, as well as the responsibility of the State and society in its preservation.

In the legislative field, Law 99 of 1993 is a fundamental pillar in creating the National Environmental System, providing the structure for environmental management in Colombia. Law 1844 of 2017 and the simultaneous adoption of the National Climate Change Policy (PNCC) that same year demonstrate the country’s commitment to addressing the challenges of climate change and fostering practices that drive sustainability. In 2018, Law 1931 reinforced these efforts by establishing specific principles and tools for climate change management, integrating economic and financial aspects into national climate planning. More recently, Law 2169 of 2021 was issued to encourage the country’s low-carbon development by establishing clear goals and minimum measures to achieve carbon neutrality and climate resilience.

Aligned with the Sustainable Development Goals (SDGs), the “Strategy for the Implementation of the SDGs in Colombia” (CONPES 3918 of 2018) plays a crucial role in guiding national actions to achieve these goals. Likewise, Law 1523 of 2012 establishes the National Disaster Risk Management Policy and establishes the National Disaster Risk Management System, strengthening the country’s capacity to face adverse events and protect the environment. Thus, Colombia’s government is committed to strengthening the country’s environmental policy to achieve a balance between economic development and environmental conservation. Some of the initiatives it has worked on include:

- » Policies and programs to reduce greenhouse gas (GHG) emissions, especially in sectors such as industry and transportation.
- » Protection of natural resources through the establishment of protected areas and actions for the conservation of biodiversity and ecosystems.
- » Promotion of renewable energies and establishment of a national goal that by 2030, 70% of the energy generated in the country will come from renewable sources.
- » Promotion of the circular economy through the promotion of reuse, recycling and waste reduction.
- » Adaptation to climate change through the implementation of climate change adaptation measures, including the implementation of early warning systems for natural disasters and the strengthening of risk management.

Colombia has signed and ratified its international environmental commitments to the world. These include the United Nations Framework Convention on Climate Change, the Kyoto Protocol, the Convention on Biological Diversity, the Stockholm Convention on Persistent Organic Pollutants, the Stockholm Convention on Inorganic Pollutants, the Stockholm Convention on Harmful Pollutants, the Stockholm Convention on Hazardous Substances, the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, the United Nations Convention on Biological Diversity and the United Nations Convention on the Conservation and Sustainable Use of Marine and Coastal Living Resources.

1.1 ECONOMIC, SOCIAL AND ENVIRONMENTAL OVERVIEW IN COLOMBIA

Through the National Development Plan (NDP) “Colombia, world power of life 2022-2026,” Colombia is beginning a transition toward total peace based on a new social contract that will lead to the overcoming of historical injustices and exclusions, the non-repetition of conflict, a change in the way we relate to the environment, and a productive transformation based on knowledge and in harmony with nature.

Table 1. Economic, social and environmental vision of the National Development Plan 2022-2026

Economic Vision	Social Vision	Enviromental Vision
» Seeks to promote a more equitable and just economy, with policies that favor the most vulnerable sectors of the population. » It proposes the implementation of a basic income system for all people living in extreme poverty. » Aims to promote the development of the social and solidarity economy, fostering job creation and strengthening the cooperative sector. » It proposes an increase in public investment in areas such as health, education, transportation and housing, in order to improve the quality of life of the population.	» Seeks the implementation of social inclusion policies that favor equal opportunities for all citizens, regardless of their origin or social status. » Proposes a comprehensive reform of the health system to guarantee universal access to health services. » Seeks to promote free, quality public education as a fundamental right for all citizens. » Proposes measures to strengthen citizen security and combat corruption in all its forms.	» Proposes policies for energy transition to renewable energy sources in order to reduce greenhouse gas emissions and mitigate the effects of climate change. » Seeks to protect biodiversity and strengthen environmental conservation policies, including the protection of moorlands and marine ecosystems. » Proposes measures for the sustainable management of natural resources, including water protection and the strengthening of environmental management in the mining sector.

Source: PND 2022-2026.

1.2

THE NATIONALLY DETERMINED CONTRIBUTION OF COLOMBIA

Colombia submitted its first Nationally Determined Contribution (NDC) in 2015 and updated its commitment in 2020. In terms of Mitigation, therefore, the Nation is committed to:

- » To reduce its CO₂ emissions by 51% by 2030 compared to the baseline, initiating a decrease in emissions between 2027 and 2030 towards carbon neutrality by mid-century.
- » Establish carbon budgets for the period 2020-2030 no later than 2023.

- » Reduce black carbon emissions by 40% compared to the 2014 level.

In terms of adaptation, Colombia will include climate change considerations in planning instruments and will implement adaptation actions in six priority sectors of the economy: transportation, energy, agriculture, housing, health, commerce, tourism and industry. Some mitigation and adaptation measures in Colombia's NDC are described in Table 2.

Bogotá's horizon in Cundinamarca, Colombia.

Table 2. Main mitigation and adaptation measures of the NDC Colombia

Main mitigation	Adaptation Measures
» <i>Promotion of renewable energies: establishes the goal of increasing the participation of renewable energies in the country's energy matrix. To this end, measures have been implemented such as the promotion of energy generation from renewable sources as well as the necessary infrastructure expansion for its development.</i> » <i>Energy Efficiency: Establishes the goal of increasing energy efficiency in different sectors, including industry, transportation and buildings. Measures have been implemented such as the adoption of more efficient technologies, the promotion of public transportation, and the renovation of urban infrastructure to reduce energy consumption.</i> » <i>Waste Management: It establishes the goal of reducing greenhouse gas emissions associated with solid and liquid waste management. Measures such as the promotion of integrated waste management, biogas recovery and controlled disposal of greenhouse gases in landfills have been implemented.</i>	» <i>Sustainable Agriculture: It establishes the goal of promoting the adoption of sustainable agricultural practices and the implementation of production systems that are more resistant to climate change. Measures such as crop diversification, integrated water resource management and the implementation of agroforestry practices have been implemented.</i> » <i>Integrated Water Resources Management: It establishes the goal of improving integrated water resources management to address the effects of climate change on water availability. Measures such as the promotion of efficient water use, the recovery of wetlands, and the implementation of aquatic ecosystem conservation measures have been implemented.</i> » <i>Ecosystem Conservation: It establishes the goal of protecting and conserving ecosystems to reduce their vulnerability to climate change and ensure the provision of environmental services. Measures have been implemented to protect natural areas, restore degraded ecosystems, and promote sustainable practices in economic activities depending on natural resources.</i>

Source: NDC Colombia, 2020.

Colombia has a National Climate Change Policy (PNCC) as a regulatory framework that establishes the objectives, principles, strategies and actions to address climate change in the country (see **Figure 1**). The PNCC defined by Law 1450 of 2011, specifically in its Article 65, establishes that the National Government must formulate and adopt the National Climate Change Policy. Subsequently, in 2017, which modifies Decree 3570 of 2011, through which the

organic and functional structure of the Ministry of Environment and Sustainable Development was established, entity in- charge of leading and coordinating its implementation.

Additionally, Law 2169 of 2021, which promotes the country's low-carbon development through the establishment of minimum targets and measures for carbon neutrality and climate resilience and

other provisions are issued, it addresses climate resilience, including measures to address extreme weather events and minimize their impact on the territory. As well as promoting the transition to cleaner and more sustainable energy sources.

Figure 1. Strategic and instrumental lines of Colombia’s PNCC

Source: PNCC Colombia.

1.3 GREEN TAXONOMY OF COLOMBIA

Colombia’s Green Taxonomy is a classification system for economic activities and assets with substantial contributions to the achievement of environmental objectives, which are in line with Colombia’s environmental commitments, strategies and policies. The taxonomy is an instrument that defines what a green investment is for Colombia and which activities contribute to achieving environmental objectives and can therefore be considered green or environmentally sustainable in Colombia.

The taxonomy is fundamental for the mobilization of resources, both public and private, towards environmental investments, as it creates a common language for green finance. Among its uses are:

01 To support in the identification and evaluation of economic activities and assets with substantial contributions to the achievement of environmental objectives.

02 To facilitate the differentiation and classification of financial instruments denominated as green, (e.g., bonds, credit/leasing portfolios, securities derived from securization processes, investment funds, differentiated investment lines, investment portfolios and stock market indexes) from other financial instruments and to promote the development of green capital markets in Colombia.

03 To favor the homologation of criteria and definitions for green finance, through a common language, increasing transparency and avoiding “greenwashing”.

04 Support the monitoring and tracking of green investments and public spending aimed at environmental sustainability goals, as well as the identification of activities with potential and gaps for resource targeting.

Taxonomy establishes seven environmental objectives for eight economic sectors:

- Climate change mitigation,
- Climate change adaptation,
- Ecosystem conservation and biodiversity,
- Water management,
- Soil management,
- Circular economy,
- Contamination prevention and control.

Figure 2. Economic sectors considered in the taxonomy and their link to environmental objectives

Climate change mitigation countermeasures in seven sectors of the economy

Economic Sectors

*These sectors enable the substantial contribution of other activities to climate change mitigation.

Five environmental targets** in three sectors of the economy

Economic Sectors

** Environmental objectives: Climate Change Mitigation, Climate Change Adaptation, Soil Management, Water Management and Ecosystem and Biodiversity Conservation.

Source: Green Taxonomy of Colombia, 2021.

The taxonomy defines technical eligibility criteria and compliance requirements necessary to assess whether the environmental performance of an asset or economic activity meets the environmental objective addressed and, therefore, whether the financing of that activity or asset can be considered aligned. The defined eligibility

criteria and compliance requirements are aligned with Colombia’s current environmental policy.

The development of this Framework is aligned with the taxonomy in relation to the analysis of resource use.

1.4 FRAMEWORK FOR GREEN, SOCIAL AND SUSTAINABLE SOVEREIGN BONDS OF COLOMBIA¹

The creation of this reference framework in August 2022 was a collaboration between the Ministry of Finance and Public Credit and the National Planning Department, with the technical contribution and participation of the Technical Directorates of the DNP, as well as all the entities of the National Government. It also had the support and advice of the World Bank, the Inter-American Development Bank (IDB), the consulting firm HPL LLC and UN Women.

The Reference Framework, designed for the issuance of green, social and sustainable bonds by the Government of Colombia, is intended to channel resources to green and social projects and expenditures that contribute to the achievement of the country’s environmental objectives, the reduction of poverty and other disparities, and the encouragement of competitiveness within a framework of inclusive and resilient development facing climate change.

This framework allows the Colombian government to issue green bonds, social bonds and/or sustainable bonds, thus supporting its environmental and social commitments. It also plays a key role in the development of the thematic bond market in Colombia. It should be noted that the Framework is aligned with the Green Bond Principles 2023 (GBP), the Social Bond Principles 2023 (SBP) and the Sustainable Bond Guide 2023 (SBG) established by the International Capital Markets Association (ICMA).

Through Resolution 1687 of July 19, 2021, the Ministry of Finance and Public Credit (MHCP) officially adopted the Colombian Sovereign Green Bond Framework, which allows the issuance of green bonds on behalf of the Nation, both in the domestic and international capital markets.

Through Resolution 2063 of August 4, 2022, which adopts the “Reference Framework for Green, Social and Sustainable Sovereign Bonds of Colombia”, for the issuance of green, social or sustainable bonds on behalf of the Nation in the local market and/or in the international capital markets?

This Framework applies to the issuance of Colombian sovereign green, social and/or sustainable bonds, both current and future, either in the local or international market. In addition, these issues must comply with existing regulations in Colombia related to Public Credit. Therefore, the development of the Framework of the District Secretariat of Finance of Bogota D. C. is aligned with the Reference Framework for Green, Social and Sustainable Sovereign Bonds of Colombia.

1. Colombian Sovereign Green, Social and Sustainable Bonds Reference Framework. https://www.irc.gov.co/webcenter/ShowProperty?nodeId=%2FConexionContent%2FWCC_CLUSTER-200712.

2. SUSTAINABLE DEVELOPMENT IN BOGOTA D. C.

Bogota D. C. is the capital of Colombia and has a population of 7,412,566 inhabitants (DANE Census 2018), which represents about 15% of the total population of the country. Bogota D. C. is the most populous city in Colombia and is the political, economic and cultural center of the country.

The growth of the Gross Domestic Product (GDP) of Bogota D. C. accumulated to the third quarter of 2023pr, was 0.9% in its original series with respect to the same period of 2022pr (National Administrative Department of Statistics, DANE). The GDP of Bogota D. C. accumulated to the third quarter of 2023 reached 193.5 trillion Colombian Pesos at constant prices, which represents real growth of 5.4% compared to the same period of 2019.

Likewise, cumulative annual growth to the third quarter was 2 percentage points (p.p.) higher than the national average, which stood at 0.7% for the same period. The city's Human Development Index for 2021 was 0.797, 6% higher than the national total of 0.7523. The per capita monetary poverty line for Bogota D. C. 2019 was \$448,749; for a four-person household it was \$1,794,9964. The Gini Index is 0.549 in 2022, 1.3% higher than the national 0.5565.

Some of the city's economic challenges include reducing economic inequality, developing a sustainable economy, improving access to housing and education, developing adequate urban infrastructure, fighting corruption and crime, as well as increasing security and generating new formal employment opportunities. In addition, it is imperative for the city to address climate change and pollution reduction, which requires improving urban infrastructure and the implementation of renewable energies.

In addition, it is vitally important to continue developing a digital economy and increasing financial inclusion.

In social matters, some challenges have to do with reducing social inequality, fighting poverty and gender inequality, eradicating violence and crime, increasing citizen security, improving access to basic public services, and promoting citizen participation. In addition, work must continue to improve access to education and youth employment, promote the inclusion of the LGBTI+ population, and address the problem of migration.

In environmental matters, the main challenges include reducing carbon monoxide pollution, improving air quality, reducing soil contamination, improving waste and solid waste management, conserve and protect biodiversity, conserve water resources, protect ecosystems, and reduce the use of fossil fuels. In addition, the

Aerial view over downtown Bogota.

city must continue to address climate change and adaptation, risk management, and improve urban mobility and public transportation.

The Analysis of Vulnerability and Risk due to Climate Change in Colombia of the Third National Communication on Climate Change (TCNCC)⁶ identified that Bogota D. C. is the second city in the country with the greatest vulnerability to climate change, after San Andrés, presenting a high risk, very high threat, very high sensitivity and low adaptive capacity, with the dimensions of food security and water resources being the most critical.

Considering this context, Bogota D. C. has developed a policy framework aligned with the Sustainable Development Goals (SDGs), including: the Integrated Solid Waste Management Plan (2005), the Bogota Declaration for Sustainable Development (2016), the Sustainable Mobility Master Plan of Bogota (2019), the District Development Plan (PDD) 2020-2024, the Land Management Plan of Bogota D. C. (update 2021) and the Action Plan of the Public Policy for Biodiversity Conservation Management, updated through CONPES 2022. C. (2021 update) and the Action Plan of the Public Policy for Biodiversity Conservation Management, updated by CONPES 2022.

The Integrated Solid Waste Management Plan (ISWMP) of Bogota D. C. was created by means of Agreement 180 of 2005, requested by the Council of Bogota D. C. on December 15 of that year. The following strategies are highlighted from the ISWMP:

- » Reduction of waste generation through the promotion of responsible consumption practices and habits, as well as the implementation of recycling and composting programs.
- » Separation of solid waste at the source to facilitate its subsequent use and recycling.
- » Strengthening public management by modernizing and improving waste collection, transportation, treatment and disposal systems.
- » Citizen participation through education and awareness of the importance of recycling and waste separation.
- » Comprehensive and sustainable management considering aspects such as environmental protection, public health, circular economy and employment generation.

6. [1] IDEAM; PNUD; MADS, DNP, CANCELLERÍA. (2017). Análisis de Vulnerabilidad y Riesgo por Cambio Climático en Colombia. IDEAM y PNUD Available on: <http://www.cambioclimatico.gov.co/resultados>.

View of North Bogota from a mountain.

In addition, the city adopted the **Bogota Declaration for Sustainable Development as an international agreement during the World Summit of Local and Regional Leaders, 2016.** The Declaration aims to commit local and regional governments, as well as other relevant actors, to the implementation of strategies and actions for sustainable development in their territories. Some of the key aspects of the Declaration are presented below:

- » Recognition of sustainable development challenges such as climate change, poverty, inequality, social exclusion and violence, and the importance of addressing them at the local and regional level.
- » Commitment to the 2030 Agenda adopted by the United Nations General Assembly in September 2015, and its 17 Sustainable Development Goals (SDGs).
- » Promotion of citizen participation recognizing the importance of citizen participation in decision-making and implementation of public policies for sustainable development.
- » Strengthening local and regional capacities to plan, implement and monitor sustainable development strategies, as well as to access financing and international cooperation.
- » Importance of cooperation and exchange of experiences: The Declaration emphasizes the need of cooperation and the exchange of experiences among local and regional governments,

as well as with other relevant actors, to accelerate progress toward sustainable development.

In relation to the Sustainable Mobility Master Plan of Bogota D. C., it was created through Resolution 171 of 2019, issued by the District Mobility Secretariat of Bogota D. C. on April 26, 2019. This plan presents a set of measures and strategies to promote the use of sustainable modes of transportation to improve the quality of life of citizens and reduce the carbon footprint of transportation in the city. Among the main measures it promotes are the following:

- » Enhance public transport by strengthening and improving the city’s public transport system through the modernization of the bus fleet, the construction of new trunk lines and transport corridors, and the integration of fares for the different transport systems.
- » Encourage active transport through the use of active transport modes, such as walking and pedaling, the construction of adequate and safe infrastructure, the implementation of public bicycle systems, and the promotion of a bicycle culture in the city.
- » Reducing the use of private vehicles through measures such as restricting the use of vehicles on certain days, promoting carpooling and implementing urban tolls.
- » Promotion of electric vehicles and clean technologies through the use of electric vehicles and clean technologies, through

the implementation of tax incentives and the creation of adequate charging infrastructure.

- » Strengthening citizen culture, fostering a citizen culture of respect and responsibility in mobility, through education and promotion of sustainable values and behaviors in transportation.

In relation to the District Development Plan (DDP) 2020-2024, Bogota D. C. defined it as a strategic guide for sustainable growth and improvement of the quality of life of its inhabitants. This plan is synergistically integrated with the National Development Plan and actively contributes to the Sustainable Development Goals (SDGs) and the Nationally Determined Contributions (NDCs) in the framework of the fight against climate change.

This Economic, Social, Environmental and Public Works Development Plan 2020-2024 “A New Social and Environmental Contract for 21st Century Bogota” is the planning instrument that articulates

the mechanisms, actions and resources around the priorities that the city has identified. The objective of the DDP 2020-2024 is:

“Consolidate a new social, environmental and intergenerational contract that allows progress towards equal opportunities, recovering the economic and social loss derived from the COVID-19 emergency, capitalizing on the lessons learned and the channels of solidarity, redistribution and economic reactivation created to address and mitigate the effects of the pandemic and thus build with the citizenry, a Bogota where the rights of the most vulnerable are guaranteed through: The expansion of opportunities for social and productive inclusion, particularly for women and young people, to progressively overcome the factors of naturalization of exclusion, discrimination and socioeconomic and spatial segregation that prevent equal opportunities and the exercise of a free, collectively sustainable and happy life” (PDD 2020-2024).

To achieve this goal, Bogota D. C. has set five purposes and 30 achievements to be reached (Table 3)

Table 3. Linking the purposes and achievements of the PDD with the SDGs

Purpose	Description	Related SDGs
Purpose 1.	To make a new social contract with equal opportunities for social, productive and political inclusion.	
City Achievements	» Close the digital, coverage, quality and competency gaps throughout the cycle of comprehensive education, from early childhood to higher and continuing education for life.	1,2,3,4,8,9,10,17
	» To complete the implementation of a public health model with a population-based, differential, gender-based, participatory, responsive and territorial approach that contributes to the modification of the social determinants of health.	1,9,2
	» Reduce the percentage of young people who neither study nor work, with emphasis on low-income and vulnerable youth.	4,8,10
	» Promote participation, cultural, sporting, recreational, patrimonial and artistic transformation that promote meeting spaces, social fabric and recognition of the other.	3,4,8,9,11,13,16,17

Purpose	Description	Related SDGs
City achievements	» Redesign Bogota's subsidy and contribution scheme to guarantee a minimum income per household, which reduces the weight of factors that affect household income equity.	1,2,6,10
	» Reduce monetary and multidimensional poverty and the feminization of poverty.	1,4,5,8
	» Implement the district care system and the strategy of mainstreaming and territorialization of gender and differential approaches to guarantee gender equality, women's rights and the development of citizen capacities at the district and local levels.	1,2,3,5,8,9,10,16
	» Increase productive inclusion and access to agglomeration economies with entrepreneurship and employability with a population-based, differential, territorial and gender approach.	1,8
	» Increase access to dignified housing, public space and equipment for the vulnerable population in urban and rural areas.	11
	» Appropriating the rural territory from its ethnic and cultural diversity as part of Bogota - Region.	11
	» Promote productive clusters and high-impact sectors with a long-term vision in Bogota - Region.	11,8
	» Increase the supply of activities and infrastructure for the use and enjoyment of free time, with a gender and differential approach, and territorial integration.	8
Purpose 2.	Change our lifestyle habits to make Bogota green and adapt to and mitigate the climate crisis. Change our lifestyle habits to make Bogota green and adapt to and mitigate the climate crisis.	
City achievements	» Reduce atmospheric, visual and auditory environmental pollution and the impact on morbidity and mortality due to these factors.	3
	» To increase the supply of public space and green areas in Bogota, promoting their use, enjoyment and benefit with universal access for citizens.	11
	» To intervene integrally in strategic areas of Bogota, taking into account heritage, environmental, social and cultural dynamics.	11
	» Care for and protect water, the Bogota River, the moorland system and the city's water system and improve the provision of public services.	6

Purpose	Description	Related SDGs
City achievements	» Increase separation at source, recycling, reuse and proper final disposal of waste in the city.	12
	» Formulate and implement concerted strategies for adaptation and mitigation of the climate crisis within the framework of environmental justice.	13
	» Implement strategies for maintenance, recovery, rehabilitation of the principal ecological structure and other areas of environmental interest Bogota - Region.	15
	» Recognize and protect all forms of life, in particular urban wildlife	15
Purpose 3.	Inspire confidence and legitimacy to live without fear and be the epicenter of citizen culture, peace and reconciliation.	
City achievements	» Reduce cultural and institutional acceptance of sexism and violence against women, and guarantee effective access to justice.	5
	» » Decrease illegality and conflict in the use and management of public and private space and in the rural and urban environment.	
	» Position Bogota - Region as the epicenter of peace and reconciliation in the country, including a rural PDET in Sumapaz and an urban PDET in the southwestern border with the municipality of Soacha.	16
	» Promote self-regulation, mutual regulation, consultation and social dialogue, generating trust and coexistence among citizens and between citizens and institutions.	
City achievements	» Reduce criminal markets, high impact crimes and violent acts with emphasis on those that affect women, pedestrians, bicycle users and public transportation users.	
Purpose 4.	To make Bogota - Region a multimodal, inclusive and sustainable mobility model.	
City achievements	» Improve the travel experience through the components of time, quality and cost, with a gender, differential, territorial and regional approach, with the regional metro network as the structuring axis, the integrated public transportation system and the bicycle lanes network.	3,9,11

Purpose	Description	Related SDGs
Purpose 5.	Building Bogota - Region with open and transparent government as well as an aware citizenship.	
City achievements	» Position Bogota’s Open Government - GABO (BOG) - as anew form of governance that reduces the risk of corruption and increases citizen control of government.	17,16,12,9
	» Promote socially, economically, environmentally and institutionallysustainable processes of integration and territorial planning in theBogota Region.	
	» Position Bogota globally as a Smart City.	
	» Increase the effectiveness of district and local publicmanagement.	

Source: Taken from: District Development Plan of Bogota D. C.

On May 30, 2024, the new District Development Plan for the period 2024-2027, “Bogota Camina Segura” (Bogota Walks Safely) was approved,

“The objective of this District Development Plan is to improve people’s quality of life by guaranteeing them the full exercise of their rights, greater security, inclusion, freedom, equal opportunities and fairer access to public goods and services; strengthening the social fabric within a framework of trust building and collaboration, taking advantage of the potential of society and its territory based on a development model committed to climate action and regional integration.”

The Plan is structured around five (5) strategic objectives aligned with the government program:

“1. Bogota Advances in Security: This objective seeks to build a city where life, difference and property are respected and where bonds of trust are built and strengthened among people, as well as between citizens and their institutions. In this way, the well-being of people and city’s potential are guaranteed.

To achieve this, safe environments must be built that allow citizens to interact without fear of being victims of crimes against life and property, guaranteeing fundamental rights, and the response of the security requires consolidating Bogota as a

city of knowledge, educated and competitive, through access to goods and services —public and private— that provide development opportunities for all. A city that embraces Science, Technology and Innovation (STI) as a driving force for and justice agencies from any threat. Likewise, peaceful co-existence, civic culture, the right to a life free of violence and public space as a safe, clean and accessible meeting place for citizens must be promoted, for which intervention plans for the integral improvement of the habitat will be implemented, based on regional integration, gender, women’s human rights, children’s and adolescents’ rights, differential-population and intersectional approaches.

2. Bogota trusts in its well-being: A city that is the same for all its inhabitants. Well-being is the effective possibility for citizens to choose what they want to be and what they want to do in the city of Bogota. To achieve this goal, we must vindicate the importance of the family as a social institution and strengthen it, promote equitable and quality access to education, health-care, spiritual, culture, recreation, sports and physical activity services. Likewise, it is necessary to guarantee the availability and access to quality food and housing solutions.

3. Bogota is confident in its potential: Bogota should be a city in which we can all develop and make the most of our potential as individuals, families, companies, academics, victims of

El Dorado Avenue in the central area of the city of Bogota, Colombia, facing east.

the armed conflict and as a society. This government and its citizens, ensuring that people feel supported by the public administration and promoting integrity, transparency, efficiency and timely attention to people’s needs. the development of entrepreneurial, highly productive and entrepreneurial ecosystems, and the cooperative sector, which are aligned with individual and territorial vocations. To this end, Bogota will be supported by an environment that stimulates the generation and social appropriation of knowledge.

4. Bogota organizes its territory and advances in its climate action: This objective proposes the recognition and effective integration of ecosystem functions and services in land-use planning, not only because of their fundamental role in environmental conservation, but also as an approach that enables sustainable economic and social development This holistic approach ensures that planning decisions consider all aspects of sustainability, benefitting both current and future generations. With this objective in mind, we will make progress in climate action, biodiversity conservation and its ecosystem services, sustainable and multimodal mobility, urban revitalization and renewal, the construction of decent housing and access to housing and public services, in order to consolidate the model of territorial occupation and the sustainable development project with a regional, district and local focus.

5. Bogota trusts its government: With this objective in mind, we will establish spaces for trust and dialogue between government and its citizens, ensuring that people feel supported by the public administration and promoting integrity, transparency, efficiency and timely attention to people’s needs.

As part of this objective, the consolidation of a value chain with three fundamental links is expected. The first of these is focused on strengthening public entities and their local, regional and international governance, with the aim of providing a better service to citizens based on public innovation, digital transformation and the generation of enabling factors and capacities in human talent. The second is based on providing the necessary communication channels to facilitate and bring the city government closer to its citizens and generate a new governance model that encourages active participation, strengthens the capacities of citizens and human talent, and generates public value through the use of data.

Finally, the third and last link, derived from the previous two, is the materialization of the institutional commitment of the Capital District to a close and efficient government that takes into account public collaboration in favor of the development of the city”⁷.

7. Basis of the District Development Plan “Bogota Camina Segura” 2024-2027.

The previous objectives of the District Development Plan 2024-2027: “Bogota Camina Segura” (Bogota Walks Safely), are aligned with different SDGs, mainly described below:

- » **Bogota advances in security:** SDG 3 - Healthcare and Well-being, SDG 5 - Gender Equality, SDG 11 - Sustainable Cities and Communities and SDG 16 - Peace, Justice and Strong Institutions.
- » **Bogota trusts in its well-being:** SDG 1- No Poverty, SDG 2- Zero Hunger, SDG 3- Healthcare and well-being, SDG 5- Gender equality SDG 10- Inequality Reduction SDG 11- Sustainable Cities and Communities and SDG 16- Peace, Justice and Strong Institutions.
- » **Bogota is confident in its potential:** SDG 4- Quality Education, SDG 8- Decent Work and Economic Growth and SDG 9- Industry, Innovation and Infrastructure.
- » **Bogota is organizing its territory and making progress in its climate action:** SDG 6- Clean Water and Sanitation, SDG 7- Affordable and Clean Energy, SDG 11- Sustainable Cities and Communities, SDG 12- Responsible Production and Consumption, SDG 13- Climate Action and SDG 15- Life and Terrestrial Ecosystems.
- » **Bogota trusts its government:** SDG 17- Partnerships for the Goals.

The District Development Plan has an investment of 90.9 trillion pesos for the period 2024-2027 in its 5 strategic objectives distributed as follows:

Overview of northern Bogotá from a mountain.

Strategic Objective	Total amount (\$ Billions)
1. Bogota improves its security	7.460
2. Bogota trusts in its well-being	27.331
3. Bogota trusts in its potential	24.444
4. Bogota organizes its territory and advances in its climate action	23.129
5. Bogota trusts its government	8.523
Total (\$ Billions)	90.886

District Planning Secretariat has established the methodological guidelines and information instruments associated with the compliance with the SDGs and their harmonization with the District Development Plan, for the fulfillment of goals and indicators prioritized within the framework of the 2030 agenda and aligned with the recommendations of CONPES Document 3918 of 2018.

Thus, 332 targets (83.0%) are linked to one (minimum) or two (maximum) SDGs and to one (minimum) or two (maximum) targets of the 2030 Agenda. The SDGs with the highest number of occurrences or relationships in the PDD targets are SDG 11 (Sustainable cities and communities), which was associated with 99 of the 400 PDD targets, and SDG 16 (Peace, justice and strong institutions), which was linked to 89 PDD targets.

Overview of Bogotá City.

Likewise, Bogotá D. C. defined its Territorial Planning Plan -POT-, which was approved by District Decree 190 of 2004. Since then, it has been periodically updated and adjusted to adapt it to the changes and needs of the city. The latest update to the POT of Bogotá D. C. was carried out by District Decree 555 of 2021: "By which the general revision of the Territorial Planning Plan of Bogotá D. C. is adopted". This update establishes that Bogotá D. C. will have a multi-scalar Territorial Occupation Model -MOT-: "Bogota will be a territory articulated from the regional, district and local level that is organized according to areas of environmental importance and cultural heritage; that responds to the climate emergency and reduces territorial vulnerability, that provides local support with better use of the land to achieve territorial balance and that encourages revitalization in consolidated areas with housing, employment, public spaces and facilities".

The POT plays a fundamental role in defining the guidelines for urban development, environmental protection and social equity in the city. This POT establishes the policies, challenges, guiding principles, strategies and long-term objectives of the territorial planning, with the aim of planning the territory from the care of its inhabitants, ecosystems and all forms of life. The following strategies stand out from the POT:

- » Principal Ecological Structure (PES): This is the highest level axis that recognizes and incorporates strategic ecosystems and areas of environmental importance as a fundamental pillar for the development of the land and its inhabitants, through water system consolidation strategies and urban, rural and regional landscape connectivity.
- » Land use: establishes the permitted land uses for each element of the PES, with the aim of guaranteeing the protection and conservation of ecosystems and their services.

- » Ecosystem conservation: Seeks to conserve and restore the city's ecosystems by protecting natural areas and restoring degraded areas. For example, ecosystem connectors are being established to link the hills with Bogotá River.
- » Citizen participation: Promotes citizen participation in land management by fostering co-responsibility between the authorities and the inhabitants in relation to urban and rural land, strengthening their heritage and identities and allowing for greater governance from the local level.

On the other hand, Bogotá's Climate Action Plan (CAP), which covers the period 2020-2050, outlines a roadmap for reducing greenhouse gas emissions and achieving carbon neutrality. The CAP sets reduction targets of 15% by 2024, 50% by 2030 and carbon neutrality by 2050. This plan includes specific actions in strategic sectors such as energy, transportation, and waste management, as well as measures to improve urban resilience and address climate risks.

Finally, Bogotá D. C. commits to climate action through CONPES 31 of 2023, which establishes the **"Public Policy on Climate Action to 2023-2050"**. This document guides the actions of Bogotá D. C. to mitigate and adapt to the effects of climate change, aligning itself with national and international commitments. This policy focuses on three objectives, which include goals of mitigation, adaptation and governance.

The integration of these policies and plans strengthens Bogotá D. C.'s comprehensive approach to sustainable urban development, contributing significantly to environmental and social objectives at both the local and national levels.

2.1

BOGOTA D. C.'S RESPONSE TO CLIMATE EMERGENCY

The Council of Bogotá D. C. declared a Climate Emergency, District Agreement 790 of 2020, in the city of Bogotá D. C. and recognizes it as a priority issue of public management, defining guidelines for adaptation, mitigation and resilience to climate change through 10 mandates and 53 strategic actions which must be met within a period of 10 years (see Table 4).

Table 4. Mandates of the Declaration on the Climate Emergency of Bogotá D. C.

Mandate	Description
Mandate One. Territorial planning around water and socio-ecosystems.	Recognizing water as an ordering element of the territory, a fundamental right indivisible from the right to life for current and future generations and essential to achieve climate justice.
Mandate Two. Protection of the Main Ecological Structure (MES) and biodiversity	Restore the main ecological structure with clearly defined sources of funding and those responsible and as a permanent short, medium and long-term process for the recovery of ecosystem services, protected areas of the Capital District and strengthening of territorial advantages against climate change.
Mandate Three. Bogota promotes food sovereignty and security	The Capital District will adopt the necessary measures to integrate the approach of food sovereignty and security into the Food Supply Plan for the Central Region and the Public Policy on Food and Nutritional Security for Bogotá, through distribution networks and access to food in the first and second food supply rings of Bogotá, in the face of probable scenarios of a decrease in regional agricultural production due to the effects of climate change and variability, effects on water resources water and soil in Bogotá and the region as well as extreme events on a national and international scale.

Mandate	Description
Mandate Four. Energy transition and reduction of greenhouse gas emissions	<i>The Capital District will adopt urgent measures to replace the use of fossil fuels in the city’s systems, with the aim of reducing greenhouse gas emissions by 50% by the year 2030, compared to 2020.</i>
Mandate Five. Prevention and care for health risks in climate change	<i>The Capital District will incorporate the climate variable into the policy of the district health system and will strengthen the sector’s capacities in terms of prevention and in order to address the consequences of climate change on people’s health.</i>
Mandate Six. Comprehensive waste management with social inclusion for the climate crisis	<i>The Capital District will formulate and implement a comprehensive and long-term solution for the management, processing and final disposal of solid waste, will incorporate the different actors in the solid waste chain in this proposal and will proceed to close the Doña Juana landfill in its current operating conditions (waste burial), generating environmentally and socially adequate conditions.</i>
Mandate Seven: Solidarity economy, resilience and decent work	<i>The Capital District will be responsible for developing social economy schemes to promote resilience and decent work as a public priority, with the aim of incentivizing the sustainability of each citizen’s life in the city, within the framework of the climate emergency.</i>
Mandate Eight. Education and participation for a new environmental ethic	<i>The Capital District will be responsible for developing social economy schemes to promote resilience and decent work as a public priority, with the aim of incentivizing the sustainability of each citizen’s life in the city, within the framework of the climate emergency.</i>

Mandate	Description
Mandate Nine. Scientific innovation and democratization of knowledge	<i>The Capital District must guarantee the best possible management of the information, innovation and knowledge available on climate risks in the city, in connection with increasing the capacity for prevention and citizen reaction to the climate crisis.</i>
Mandate Ten. Eco-urbanism and sustainable construction for a resilient territory that adapts to and mitigates climate change	<i>Define and update, in line with current national and district regulations, the rules, criteria and standards aimed at mitigating and adapting the territory to climate change in the processes of planning, design, development and construction on urban land and land for urban expansion, with criteria of sustainability and efficiency, in harmony with the environment and with a view to social equity.</i>

Source: Decree 790, 2020.

Bogota D. C. is committed to reducing GHG emissions by 15% by 2024 and 50% by 2030, with the ultimate goal of becoming carbon neutral by 2050. To ensure compliance, the targets are linked to the city’s long-term commitments and the PDD.

» The 15% reduction by 2024 was defined in the 2020-2024 PDD.

» The 50% reduction by 2030 was defined in February 2020 through the signing of the declaration of climate crisis with the departments of Boyacá, Cundinamarca, Huila, Meta and Tolima.

» The goal of carbon neutrality by 2050 was signed through the Participation Agreement with C40 in January 2020.

Some of the policy’s most representative mitigation goals are listed below:

» Actions to promote the use of FNCER.

» Instruments to promote improvements in energy efficiency in buildings in all sectors of the city.

» Projects aimed at the integral management of energy and urban space in the District with a territorial emphasis on low and ultra-low emission zones and other established strategic zones.

» Lines of the Bogota D. C. Metro system in operation.

» New public transport infrastructure projects in operation.

» Reduction of tons of CO₂ equivalent in final waste disposal processes.

» Waste treatment systems and/or some of their by-products in coordination with the programs of the Solid Waste Management Plans in operation.

» Total installed capacity of domestic wastewater treatment of the WWTP.

Other mitigation goals are listed in Table 5.

Table 5. Goals of the most representative mitigation actions of the CAP.

Sector	Description	2024	2030	2050
Existing Residential Buildings	% of all buildings that have updated their lighting to LED	40%	70%	90%
	% of all buildings equipped with low-energy appliances	40%	55%	90%
	% of all buildings that have changed to electric stoves for cooking	3%	15%	50%
New Residential Buildings	% of new buildings that use solar water heating	5%	10%	15%
Street lighting	% of street lamps that have been updated to LED	30%	50%	90%
Industry	% improvement in energy efficiency	3%	25%	71%
DOTS	% of new housing in DOTS areas	1%	3%	8%
	% reduction in kilómetrers traveled in vehicles	0%	5%	10%
Waste	% recycled paper waste	26%	50%	80%
	% recycled plastic waste	8%	10%	18%
	% waste water treated with advanced technologies	30%	100%	100%

Source: PAC, 2020.

In terms of adaptation, Bogota’s goal is to make the city resilient to the climate threats that affect its territory most intensely by 2050, through actions that reduce climate vulnerability and increase adaptive capacity. These milestones were built on the following commitments made by the city:

- » The District Development Plan “A new social and environmental contract for 21st-century Bogota”, which includes as part of its axes or pillars, changing our lifestyle to make Bogota D.C. greener, adapting to and mitigating the climate crisis
- » The Declaration of Climate Crisis with the departments of Boyacá, Cundinamarca, Huila, Meta and Tolima, which establishes among its commitments to take all necessary measures to protect and restore strategic ecosystems and thus halt the loss of biodiversity and mitigate the climate crisis (Commitment 2), which is of great importance for increasing the socio-ecosystemic resilience of the city and the region, to the effects of climate change.
- » Likewise, Commitment 4 of the Declaration urges the formalization of a commitment to sustainable rural development, recognizing the work of those producers who develop programs for adaptation to and mitigation of the climate crisis, as well as processes for the restoration and conservation of ecosystems; pillars contributing to strengthening the dimensions of food security and water resources in the Capital District, identified in the Third National Communication on Climate Change (TCNCC) as those with the highest climate risk.
- » The goal of becoming a resilient city by 2050 was signed through the Participation Agreement with C40 in January 2020, which seeks to ensure that Bogota D.C. adopts the necessary measures to protect citizens from increasing climate risks.

The fulfillment of this goal, the actions of the Public Policy on Climate Action Bogota D. C. 2050 are directly associated with the priorities for adaptation in Bogota D. C.

Therefore, climate actions focus on reducing the risk of the following climate hazards organized from highest to lowest priority: Floods, mass movements, forest fires, torrential floods, and urban heat islands.

In addition, it is expected that, with its implementation, the people of Bogota will obtain social, environmental and economic benefits

that will help overcome the barriers that feed inequality and are exacerbated by the climate crisis. The actions include:

- » Consolidation of Urban Forests.
- » Ecosystem connectors for the Bogota-Region.
- » Payment for Environmental Services Program.
- » Actions to reduce vulnerability in areas of climate resilience and risk protection.
- » Actions for the protection and management of water sources, rainwater and runoff.
- » Nature-based Solutions (NbS) actions for managing water scarcity in the D. C.’s water supply sources.

Its fulfillment is based on the governance actions defined in the policy, by contributing to strengthening timely access to clear and accessible information on climate risks; promoting the prior, broad, deliberate, conscious, responsible and effective participation of the people of Bogota in its management and integrating criteria of climate justice into its implementation to avoid disproportionate burdens on the most vulnerable sectors of the city.

Article 33 of Agreement 546 of 2013 modified the functions of the District Environment Secretariat, established in the Article 103 of Agreement 257 of 2006, incorporating into literal u) numeral 7 and numeral 8, which will read as follows, respectively: “7. Lead the formulation of policies, plans and programs for risk management and climate change”; 8. Approve, in exclusively environmental matters and those relating to risk management and climate change, the guidelines, policies, plans, programs and projects developed by other entities of the Capital District”.

District Decree 837 of 2018 “By means of which it is adopted The District Plan for Disaster Risk Management and Climate Change for Bogota 2018-2030 and other provisions” established in its article 3 that this plan will be articulated with other planning and management instruments of the Capital District.

The District Plan for Disaster Risk Management and Climate Change for Bogota 2018-2030 and other provisions” established in its Article 3 that this plan will be articulated with other planning and management instruments of the Capital District.

3.

LEGAL AND REGULATORY FRAMEWORK FOR THE ISSUANCE OF BONDS IN BOGOTA D. C.

The issuance and administration of bonds is governed by the following legal and regulatory framework:

- » 1991 Political Constitution, Art. 364.
- » Law 80 of 1993; Art. 41, Par. 2.
- » Law 185 of 1995.
- » Law 358 of 1997, modified by Law 2155 of 2021.
- » Law 533 of 1999.
- » Law 549 of 1999.
- » Law 781 of 2002.
- » Law 819 of 2003; Art. 14 to 21.
- » Law 1523 of 2012; Art. 67.
- » Constitutional Court Rulings: C-004-93; C-112-93; C-149-93; C-404-2001.
- » Estatuto Orgánico del Presupuesto.
- » Law 38/89, Art. 32.
- » Law 179/94, Art. 55, inciso 12.
- » Law 2073 of 2020, Art. 4 assigned to the MHCP the definition of the Public Debt Bonds Reference Frameworks for the financing of Sustainable Development.
- » Decree 1068 of 2015.
- » Regulatory Decree of the Organic Statute of the District Budget 777 of 2019.
- » District Decree 192 of 2021.
- » Basic Legal Circular SFC.
- » External Circular 020 de 2022 SFC.
- » Article 289 of the Economic, Social, Environmental and Public Works Development Plan of the Capital District 2024-2027 “Bogotá Camina Segura”.
- » Resolution 1687 of July 19, 2021, the Ministry of Finance and Public Credit (MHCP) adopted the Colombian Sovereign Green Bond Reference Framework for the issuance of green bonds on behalf of the Nation in the local market and/or international capital markets.
- » Resolution 2063 of August 4, 2022, which adopts the “Reference FRAMEWORK for Sovereign Green, Social and Sustainable Bonds of Colombia”, for the issuance of green, social or sustainable bonds on behalf of the Nation in the local and/or international stock markets.

SECTION 2

REFERENCE FRAMEWORK FOR GREEN, SOCIAL AND SUSTAINABLE BONDS OF BOGOTA CAPITAL DISTRICT

The Reference Framework is a set of technical guidelines and criteria on transparency and disclosure, based on international best practices, which promote market integrity and facilitate the monitoring of resources for sustainable projects and the understanding of their estimated impact. Through this Framework, the District Finance Secretariat of Bogota D.C. can issue three types of bonds:

Green Bonds	Social Bonds	Sustainable Bonds
An amount equal to the re-sources obtained will be used exclusively to finance new ex-penses and/or eligible green projects and/or refinance ex-isting expenses and/or eligible green projects.	An amount equal to the re-sources obtained will be used exclusively to finance new ex-penses and/or eligible social projects and/or to refinance existing eligible social expenses.	An amount equal to the re-sources obtained will be used exclusively to finance or refi-nance eligible expenses that fall within the categories of eligible green and social expenses.

To this end, the District Treasury Secretariat has identified six eligible green categories and five eligible social categories based on the 2023 Sustainable Bond Guidelines, the Green Bond Principles and the Social Bond Principles of the International Capital Market Asso-ciation (ICMA), the Green Taxonomy of Colombia and international best practices.

Green Bonds	Social Bonds
I. Clean Transportation II. Products adapted to the circular economy, produc-tion, technologies and processes and/or certified eco-efficient products. III. Sustainable and integrated water and wastewater management IV. Land use, conservation and sustainable manage-ment of natural resources V. Green Buildings VI. Energy efficiency	I. Empowerment, equity and socioeconomic progress II. Job creation and programs aimed at preventing and/ or alleviating unemployment. III. Affordable basic infrastructure IV. Disaster risk reduction V. Access to education, health, housing and other es-sential services

The following 4 principles are defined below:

- I. Use of Proceeds
- II. Project selection and evaluation
- III. Proceeds Managemen
- IV. Reporting

To complement this Framework, the District Treasury Secretariat will issue an administrative act adopting the reference framework and detailing the procedures for its implementation.

This administrative act will establish and delimit the responsibilities of each entity in the governance of the Reference Framework, as well as the corresponding thematic roundtables. Among the aspects to be regulated are: The designation of the Technical Sec-retariat (for the green and social roundtables), the delegates of the central administration entities for participation in these, the functions, the criteria for selecting projects according to the eli-gible categories, the method of call for applications, the review deadlines, among other relevant aspects.

4. USE OF PROCEEDS

The expenses and/or green and/or social projects eligible for fi-nancing and/or refinancing with resources from the Expenditure and Investment Budget of Bogota D. C., will be those programs and/or projects included in the Annual Investment Operating Plan (POAI) that comply with current legal regulations for the allocation

of public debt. The POAI will indicate the investment projects clas-sified by programs and entities. This plan will be consistent with the Multi-Year Investment Plan of the District Development Plan. The use of proceeds will only be allocated to projects and programs that are aligned with the eligible categories of this framework

4.1. ELIGIBLE GREEN CATEGORIES

The eligible green categories are aligned with the technical eligibility criteria and requirements set out in Colombia’s Green Taxonomy. The use of resources will only be allocated to projects and programs that are aligned with the eligible categories of this framework.

Eligible Green Category	Clean transportation
Description	Eligible expenses include financing and/or refinancing of costs related to project study, design, construction, operation, training and program implementation for: I. Urban public transport with no direct emissions, in the following types of investments: a. New metro lines, expansion and renovation b. Electric Buses c. Trolley buses (Light rails) d. Trains II. Urban public transport with reduced CO₂ emissions, for example⁸ a. Fast transit buses, intermediate buses or connecting buses b. Light trains, metro trains, trams, trolleybuses, commuter trains c. Taxis, private vehicle sharing or ride sharing systems. III. Micro-mobility, including: a. Zero-emission micro-mobility systems, such as public shared systems for bicycles, scooters and other types of vehicle weighing less than 350 kg, or bicycles and cargo tricycles for urban goods distribution, cargo and passenger motorbikes for rural areas, etc.

8. New fleet: Direct emissions must be less than 20 gCO₂e/pkm until 2025 (from that year forward, only fleets with zero direct emissions will be eligible). Fleet renewal: the new fleet has an emission factor of less than 30 gCO₂e/pkm. Fleet renewal and physical disintegration: the new fleet has an emission factor of less than 40 gCO₂e/pkm and the eligible project includes the physical disintegration of the renewed vehicle. In relation to direct air emissions from the exhaust gases of internal combustion engines, nitrogen oxides (NOx), total hydrocarbons (THC), non-methane hydrocarbons (NMHC), carbon monoxide (CO), particulate matter (PM), buses must comply with the current Euro VI standard. From January 1, 2023, all diesel engines manufactured, assembled or imported into the country will have to comply with the maximum permissible limits for the emission of air pollutants corresponding to Euro VI technologies, or equivalent or higher.

Description	b. Vehicles classified by maximum speed (35 km/h urban, 45 km/h rural) and electric motor power (250-1,000 watts / 500-750 watts). c. Infrastructure and equipment for low-emission urban public transport (e.g. infrastructure for electric charging, and technology associated with operation, control, payment collection and user information, modal transfer facilities, etc.). IV. Infrastructure for transport with reduced emissions in accordance with section II.⁹ a. Infrastructure and equipment required for zero direct emissions transportation (e.g., electric vehicle charging points, smart grid upgrades) and promoting intermodality between low-carbon modes of transportation (e.g., mobility hubs). b. Services associated with the purchase, maintenance, recycling, and replacement of batteries for low-carbon vehicles and transportation infrastructure. c. Infrastructure and equipment for low-carbon micro-mobility (e.g. redistribution of the road profile to increase the pedestrian area and bicycle lanes and micro-mobility systems in general; urban equipment for stations of shared public micro-mobility systems; last-mile urban consolidation and distribution points for goods in micro-mobility and cross-docking systems, etc.). V. Intercity transportation (cargo and passengers)¹⁰ a. Any fleet of vehicles or rolling stock used for intercity transportation, whether for cargo or passengers, zero-emission or hybrid road vehicles are automatically eligible.
Green Taxonomy of Colombia	T1. Urban Public Transport T2. Micro-mobility T3. Transport infrastructure T4. Intercity transport (cargo and passengers) T5. Private transport
Benefits	Reduction of greenhouse gas emissions Mejora de la Improvement of air quality Energy saving

9. Only infrastructure that is essential for the operation of the transport service will be considered. Investments will not be used to finance or refinance infrastructure dedicated to fuel transportation.

10. The fleet of vehicles or rolling stock that transport fossil fuels or fossil fuels mixed with alternatives are not eligible.

Alignment with SDGs	11 SUSTAINABLE CITIES AND COMMUNITIES 13 CLIMATE ACTION
Alignment with NDCs (goal)	Bogota´s Goal: 483 electric, natural gas or Euro V diesel engines with filter buses (to be defined). Colombia Goal: Increase in the modal share of cycling by 5.5% in the participating cities: Bogota, Cali, Medellín, Barranquilla, Cartagena, Soledad, Bucaramanga, Soacha, Pereira, Santa Marta, Valledupar, Pasto, Montería, Neiva, Armenia, Sincelejo, Popayán. Energy efficiency: Colombia is committed to improving energy efficiency by 10% by the year 2030. 600,000 electric vehicles in the following categories: taxis, passenger vehicles, light vehicles, light trucks, official vehicles. Rail interconnection linking five (5) municipalities with the capital city. 39,6 km planned for 2024. A mitigation potential of 0.09 Mt CO₂ eq was modeled for 2030.

View of downtown Bogota from a mountain.

Eligible Green Category	Products adapted to the circular economy, production, technologies and processes and/or certified eco-efficient products.
Description	I. Eligible expenses¹¹ include the financing and refinancing of costs related to: » Studies, design, construction, operation, maintenance, expansion of projects for sustainable waste management, and pollution control and prevention. » Design and implementation of training, education, research and development programs for sustainable waste management, pollution control and prevention. Including the following: Waste II. Separate collection and transportation of non-hazardous waste in the source-segregated fraction¹² III. Anaerobic digestion of organic waste with capture or use of methane¹³, for example, from municipal solid waste, ordinary industrial waste and agricultural activities. IV. Composting of organic waste¹⁴ that is used as fertilizer, as a soil improver or for other uses. V. Use of non-hazardous waste material¹⁵ for the production of suitable secondary raw materials to replace virgin materials in production processes.

11. For the purposes of this reference frame, the financing of projects with activities based on fossil fuels is excluded.

12. Waste is separated at source (according to its characterization and composition) and collected separately, with the aim of preparing it for reuse and/or recycling. The projects include facilities that optimize transport, such as transfer stations, as well as investments in compaction, shredding or other activities that improve logistical capacity in transport.

13. Organic waste is segregated at source and collected separately, or an appropriate separation system is in place prior to disposal. Methane leakage from relevant installations is controlled by a monitoring plan and effective measures to prevent emissions of this gas. The biogas produced is used directly to generate electricity and/or heat, upgraded to biomethane for injection into the natural gas network, used as fuel for vehicles (e.g., bioCNG) or as a raw material in the chemical industry (such as for the production of H2 and NH3). Systems that include biogas combustion are part of a program of transition to other types of use in the medium term (2-3 years). The digestate produced is used as fertilizer, soil improver or for other uses, directly or after composting or any other treatment. Activities that facilitate the use and exploitation of biogas (such as drying, compression or similar) are also contemplated. In plants dedicated to the treatment of organic waste, organic waste constitutes a significant part of the input raw material (at least 70%, measured by weight, as an annual average). Co-digestion is eligible only with a minor share of advanced bioenergy feedstock (up to 30% of the input feedstock) that complies with the eligibility criteria for the agricultural sector (AFOLU sector) and with crops that comply with applicable national regulations.

14. Organic waste is segregated and collected separately and methane losses in the compost production process are minimized.

15. At least 50%, in terms of weight, of the non-hazardous waste collected separately and processed is converted into secondary raw materials. Assets for mechanized separation and transformation activities (e.g. drying, cutting, pelletizing, extrusion) are also eligible.

Description	VI. Energy production from non-recyclable waste fractions (thermal treatments¹⁶), provided that this activity is carried out from the non-recyclable fraction or from the waste of waste from material recovery or recovery centers or in the absence of accessible recycling infrastructure and there is a risk that the waste will generate social and environmental impacts or when the activity supports the displacement of fossil fuels for energy production. VII. Capture and utilization of landfill gas when the landfill or landfill cell is permanently closed and no longer receives waste¹⁷.
Green Taxonomy of Colombia	RC2. Separate collection and transportation of non-hazardous waste in the fraction segregated at source RC3. Anaerobic digestion of organic waste with capture or use of methane RC4. Composting of organic waste RC5. Use of non-hazardous waste material RC6. Energy production from non-recyclable waste fractions (thermal treatments) RC7. Capture and utilization of landfill gas

16. The generation of thermal energy from non-recyclable waste is eligible only when it meets all of the following criteria: 1. This activity has been identified in the Integrated Solid Waste Management Plans (ISWMP) and occurs from the non-recyclable fraction or waste from waste recovery or utilization centers, or when there is no accessible recycling infrastructure and there is a risk that the waste will have social and environmental impacts (e.g., waste polluting coastal ecosystems in communities without a recycling infrastructure). 2. It displaces the use of fossil fuels for energy production by powering the plant with energy generated by thermal treatment.

17. The landfill gas produced is used directly for the generation of electricity and/or heat, or upgraded to biomethane for injection into the natural gas network, or used as fuel for vehicles (e.g., bioCNG) or as a raw material in the chemical industry (for the production of H2 and NH3, for example). Systems that include biogas flaring are eligible only if they are part of a program of transition to other types of utilization in the medium term (less than 3 years). Methane emissions from the landfill and leaks from the landfill gas collection and utilization facilities are monitored through a monitoring plan.

Benefits	Reduction of air and soil pollution Reduction of greenhouse gas emissions Efficient use of resources
Alignment with SDGs	3GOOD HEALTH AND WELL-BEING 11SUSTAINABLE CITIES AND COMMUNITIES
Alignment with NDCs (Goal)	Bogota Goals: Mechanical Biological Treatment (MBT) implementation on the organic fraction of 2020: 1%, 2025: 3%, 2030: 5%. Recycling: Implementation on the paper, cardboard and plastics fraction of 2020: 10%, 2021: 13%, 2022: 15%, 15% constant until 2030. Biogas combustion: Percentage of biogas treated in 2025: 1% and in 2030: 2%. In Landfill Doña Juana in 2025: 21% and in 2030: 26%. Use of biogas: Percentage of biogas generated and used in Landfill Doña Juana in 2025: 0.4%, 2030: 0.6%.

Excursion from the district of “Los Laches” passing by the hill of the cross and culminating at the hill of Guadalupe in the heights of Bogota in Colombia.

Eligible Green Category	Land use, conservation and sustainable management of natural resources
Description	Eligible expenses include the financing and/or refinancing of costs related to: I. Administration and management of protected areas, wetlands, ecological mountain parks or other conservation and environmental management schemes¹⁸ of interest to Bogota D. C., for example, through actions of restoration, rehabilitation and ecosystem connectivity, monitoring, evaluation and follow-up. II. Design and implementation of economic incentive programs for rural environmental conservation, such as payment for ecosystem services and conservation agreements.¹⁹ III. Programs and projects for ecological restoration, rehabilitation or recovery and afforestation in urban and/or rural areas, for example, through the planting and management of gardens in public spaces, maintenance of vegetation cover, information systems, monitoring, follow-up and evaluation for the management of biodiversity, ecosystem services, urban trees, ecological recovery, rehabilitation or restoration of protected areas and other areas of environmental interest. IV. Organic farming programs and projects²⁰ at the urban level and productive units²¹ focused on farmers' markets and marketplaces. V. Research, strengthening of institutional capacities and environmental education, for example, for organic farming, ecological restoration, rehabilitation or recovery, and tree planting in urban and/or rural areas.

18. In accordance with the corresponding Management Plan.

19. Some examples of programs include the District Program for Payment for Environmental Services-PSA in rural Bogota (<https://www.undp.org/es/colombia/discursos/psa-hidricos-bogota>) or the Program for Increasing Climate Resilience and Reducing Vulnerability.

20. The definition of ecological agriculture established by MADR Resolution 187 of 2006 and its amendments are adopted: "Ecological production is a production process that considers soil fertility as a key factor for the production of food, drastically reduces the use of external inputs in the production unit and promotes practices that guarantee quality and safety throughout the organic food production chain. This definition emphasizes soil protection and good management to maintain its fertility and contrasts with conventional agriculture, which uses synthetic chemicals totally or partially, and traditional farming methods. The interpretation of the concept of organic agriculture is complemented by the objective of safeguarding ecosystem services, managing water resources and acting against climate change.

21. The production unit is not operating on land that has been converted from high carbon stock (HCS) land covering more than one hectare after January 1, 2010. This includes wetlands, peatlands, forested areas or other designated HCS areas, according to the threshold of 35 tC/ha. 2. There will be no clearing of woody vegetation taller than 3 meters after 2020 in the production unit in question. 3. Sustainable Management Plan.

Green Taxonomy of Colombia	C1. Investments to strengthen the sustainable forestry sector C2. Restoration of degraded forest land C3. Conservation, management and sustainable use of natural forests C4. Reforestation for commercial purposes
Benefits	Biodiversity and ecosystem protection. Reduction of deforestation and soil degradation. Food security improvement. Poverty reduction and improvement of life quality. Climate change adaptation and mitigation.
Alignment with SDGs	11 SUSTAINABLE CITIES AND COMMUNITIES 12 RESPONSIBLE CONSUMPTION AND PRODUCTION 13 CLIMATE ACTION 15 LIFE ON LAND
Alignment with NDCs (goal)	Bogota Measure: Comprehensive program for the implementation of livestock practices and pasture management. Colombia Forestry Sector: Colombia commits to reducing deforestation and increasing reforestation, with the aim of reaching a net zero deforestation rate by 2030.) Planting of 27,282 hectares (300,000 Hectares 2015-2030). An increase in ambition is anticipated for 2030 based on the annual increase in plantations to 34,165 Ha (46,000 ha including baseline scenario), which would be equivalent to 368,836 Ha in commercial forest plantations for the 2030 mitigation scenario. Restoration of 962,615 hectares (2015-2030). Three (3) national natural regions with the greatest agricultural potential (Andean, Caribbean and Orinoco) participating in the agroclimatic technical roundtables coordinated with the national roundtable and one (1) million producers receiving agroclimatic information to facilitate decision-making in agricultural activities.

Eligible Green Category	Sustainable and integrated water and wastewater management
Description	Projects²² projects regarding studies, design, construction, operation, maintenance, expansion and adaptation for the use, sanitation and efficient management of water and wastewater²³ mainly focused on residential users, which includes the following investments²⁴: I. Aqueduct Systems²⁵: New integrated systems or improvements to existing systems for collection, conveyance, treatment, storage, transportation and distribution. II. Sanitary and combined sewer systems²⁶

22. For the purposes of this reference framework, financing for projects with activities based on fossil fuels is excluded.

23. Water treatment plants and pumping systems must meet a specific threshold separate from other assets. The average energy carbon intensity of these systems must be equal to or less than 100 gCO₂/kWh over the lifetime of the infrastructure.

24. Eligible expenses fulfill the condition of reducing the project’s GHG emissions.

25. New aqueduct systems must meet the following two eligibility criteria: 1. New aqueduct systems, in line with the current Basic Water and Sanitation Regulation (RAS), must ensure that water leaks are limited and that adequate maintenance measures are complied with. 2. Water treatment plants and pumping systems must meet a specific threshold separate from other assets. The average carbon intensity of the energy used by these systems must be equal to or less than 100 gCO₂/kWh over the lifespan of the infrastructure. Projects to improve existing systems must meet one of the eligibility requirements: a. Reduce the average energy consumption of the system by at least 20% kWh/m³ of authorized billed/unbilled water supply, b. Close the gap, by at least 20%, between water supply system losses and the target water leakage values (determined by the Index of Losses per Invoiced Subscriber - IPUF), established in CRA Resolution 688 of 2014, c. increase the coverage of existing systems that already comply with the target water leakage values (IPUF) established in CRA Resolution 688 of 2014.

26. Those that prevent untreated wastewater from leaking or overflowing. Collection and transportation or conveyance systems that increase the volume of treated wastewater in accordance with the current regulatory framework and/or reduce the discharge of raw (untreated) wastewater. Those that reduce water consumption through reuse (including projects to segregate municipal drainage for specialized treatment). Wastewater collection systems, separate from rainwater, which favor greater efficiency in the treatment systems for this water.

Description	III. Centralized wastewater treatment systems (e.g., municipal and clustered population centers), including sewerage network and treatment: a. New wastewater treatment systems that replace GHG-intensive treatment systems such as pit latrines, septic tanks, anaerobic lagoons²⁷, etc.). b. Existing systems that increase the capacity of the treated flow or the efficiency of the pollutant load removal process. c. Urban Drainage Systems which demonstrate 100% retention of runoff water in the urban area. IV. Efficient use of water: a. Systems and technologies that generate a reduction of at least 20% in the annual water consumption of residential projects (e.g. aqueduct systems, construction and building renovation). b. Systems and technologies used for water reuse (such as closed-loop systems, e.g., the use of rainwater or gray water for gardens, toilets). Systems and technologies with no water use (e.g., systems for sanitation, refrigeration, which favor a reduction of at least 20% in annual water consumption.
Green Taxonomy of Colombia	A1. Aqueduct systems A2. Sanitary and combined sewer systems A3. Wastewater treatment systems A4. Investments for the efficient use of water
Benefits	Protection of water quality Reduction of flood risk Increase in water availability Improvement of public health Promotion of economic sustainability

27. For anaerobic systems, the following additional eligibility criteria apply: Methane leakage from relevant installations (e.g. in biogas production and storage, in energy generation and digestate storage) is controlled by means of a monitoring plan. The biogas produced is used directly for the generation of electricity and/or heat, or the bio methane is used for injection into the natural gas network, or as fuel for vehicles (as bioCNG) or as a raw material in the chemical industry (e.g. for the production of H₂ and NH₃). Systems that include biogas combustion are eligible only if they form part of a medium-term transition program (less than 3 years) to other types of utilization. Activities that facilitate the use and exploitation of biogas, such as desiccation, compression or similar, are also considered.

Alignment with SDGs	12 RESPONSIBLE CONSUMPTION AND PRODUCTION 6 CLEAN WATER AND SANITATION
Alignment with NDCs (goal)	Colombia Goal: Water and basic sanitation: 1. Develop protection and conservation actions in 24 aqueduct supply basins in municipalities susceptible to shortages during low rainfall and high rainfall seasons. 2. Develop structural and non-structural risk management actions for adaptation to climate change in 30% of the municipalities prioritized by susceptibility to shortages in the dry and rainy seasons (2030). 3. Achieve 68% urban domestic wastewater treatment by 2030. 4. Reuse 10% of treated domestic wastewater by public water supply service providers by 2030.

Bogota River at the height of the municipality of Soacha Cundinamarca, a neighbouring municipality to the capital of Colombia.

Eligible Green Category	Green Buildings
Description	Eligible expenses include the financing and/or refinancing of costs related to the study, design, construction, modernization, operation and maintenance of buildings²⁸, including: I. New public buildings that have LEED, EDGE, Casa Colombia, HQE international certifications that prove the percentage of savings against the baseline of the Sustainable Construction Resolution²⁹. II. Projects for green Social Interest Housing (VIS) and green Popular Interest Housing (VIP)³⁰. Modernization of buildings with at least a 30% reduction in equivalent carbon dioxide.
Green Taxonomy of Colombia	C1. Construction of new buildings C2. Renovation of buildings C3. Acquisition and ownership of buildings

28. Buildings should not be used for the extraction, storage, transportation or manufacture of fossil fuels. The energy for the building’s operation should not come directly from fossil fuels (e.g., power generation plants).

29. The final energy consumed in the building (kWh/m2 year) should be at least 30% or more energy efficient. At least 15% of all wood products used in the new construction for structures, cladding and finishes must have been recycled or reused, or come from sustainably managed forests, as certified by third-party audits carried out by accredited certification bodies (such as FSC and PEFC standards or equivalent). Ministerio de Vivienda, Ciudad y Territorio. 2015. Sustainable Construction Resolution 0549 of 2015. Available at: <https://www.cccs.org.co/wp/download/resolucion-0549-de-2015/?wpdmdl=5681&refresh=612422ad9f44f1629758125>.

30. Annual energy consumption (kWh/m2 year) must be reduced by 20% compared to the baseline established by Resolución Modernización de Construcción Sostenible 0549 of 2015. Equivalence with sustainable construction certifications: If the project has a sustainable construction certification with energy consumption savings percentage criteria equivalent to or higher than the indicated eligibility criteria, the building is considered eligible. The building must prove the percentage of energy consumption savings against the baseline of the Sustainable Construction Resolution. Certifications such as: LEED (Leadership in Energy & Environmental Design), EDGE (Excellence in Design for Greater Efficiency), CASA Colombia, HQE International, Others (e.g., Living Building Challenge).

Benefits	Climate change mitigation Energy saving Water saving GHG reduction
Alignment with SDGs	9 INDUSTRY, INNOVATION AND INFRASTRUCTURE 11 SUSTAINABLE CITIES AND COMMUNITIES 13 CLIMATE ACTION
Alignment with NDCs (goal)	Bogota Alternative energy solutions based on non-conventional renewable energy sources in infrastructure and housing projects

El Salitre wetland in Bogota, Colombia.

Eligible Green Category	Energy Efficiency
Description	Eligible expenses include the financing and refinancing of costs related to projects and programs dedicated to energy efficiency improvements³¹, including: I. Efficiency measures in lighting systems, such as the installation of LED lighting devices and systems, air conditioning and pumping; thermal insulation, hydraulic appliances, elevators, and Energy Management Systems. II. Professional services: a. Technical consultations (energy consultants, energy simulation, project management, issuance of Energy Performance Certificates –EPC–, specialized training, etc.) related to the individual measures mentioned above. b. Accredited energy audits and building performance evaluations. c. Energy management services and contracts, including services provided by Energy Service Companies (ESCO). III. Self-sufficient public lighting systems that do not require the construction of power transmission networks. Public lighting management systems based on the presence of people and on predetermined schedules, in such a way as to prevent the misuse of energy at times when lighting is not required in the area.
Green Taxonomy of Colombia	C1. Construction of new buildings C2. Renovation of buildings
Benefits	Energy saving Reduction of greenhouse gas (GHG) emissions Reduction of short-lived pollutants
Alignment with SDGs	7 AFFORDABLE AND CLEAN ENERGY

31. Priority will be given to interventions with energy savings of between 10% and 30% (10% corresponds to the national target and 30% is associated with the highest cost-benefit ratio).

View of northern Bogotá from a mountain.

4.2. ELIGIBLE SOCIAL CATEGORIES

Definition of eligible population

In Colombia, Vulnerable Population³² is defined in accordance with Law 1753 of 2015, which establishes the National Policy for Comprehensive Care for Early Childhood, Childhood, Adolescence and Youth. This law defines the vulnerable population as that which is in a situation of social or economic risk or exclusion, and which requires priority attention from the State. This definition includes groups such as: children and adolescents in situations of poverty, abandonment, violence, labor or sexual exploitation, among others;

People with disability, chronic illness, mental illness and addiction; elderly people in abandonment or social vulnerability; ethnic groups and people of African descent suffering discrimination and exclusion; victims of armed conflict and forced displacement; women who are victims of gender-based violence and their children. The use of resources will only be destined for projects and programs that are aligned with the eligible categories of this framework.

32. To identify the vulnerable population, the information reported in SISBEN - Sistema de Identificación de Potenciales Beneficiarios de Programas Sociales (Identification System for Potential Beneficiaries of Social Programs) is taken into account <https://www.sdp.gov.co/gestion-estudios-estrategicos/sisben/metodologia-4>.

Eligible Social Category	Job creation and programs aimed at preventing and/or alleviating unemployment
Eligibility Criteria	Eligible expenses include the financing and/or refinancing of costs related to: I. Articulation of the entrepreneurial ecosystem and the science, technology and innovation ecosystem II. Promotion of digital commercialization, creation of new business models and strengthening creative districts, for example, projects and programs implementing creative industries such as design, technology, arts and culture, promoting innovation and local economic development. III. Acceleration, sophistication and innovation programs to trigger job creation and entrepreneurship. IV. Activities to promote and preserve employment and the business sector, particularly micro, small and medium-sized enterprises, as well as promoting sustainable tourism. V. Financing and funding mechanisms for financing instruments for entrepreneurship growth and (MSMEs) MiPymes³³. VI. Urban and peri-urban ecological agriculture programs and projects, for example: programs and projects strengthening the actors of the District Food Supply System³⁴. VII. New skills, bilingualism and/or job skills with special emphasis on vulnerable populations in urban and rural areas.

33. For the purposes of this framework, Mipymes (MSMEs) are classified according to the number of employees and the volume of annual income, in accordance with the definitions established by the Colombian Ministry of Trade, Industry and Tourism. According to the Ministry of Trade, an MSME is defined as any economic unit operated by a natural or legal person in agricultural, industrial, commercial or service activities, in rural or urban areas. For classification by company size, i.e. micro, small, medium and large enterprise, one or more of the following criteria may be used: 1. Total number of employees, 2. Annual gross sales value and 3. Total asset value. This concept corresponds to Law 1450 of 2011 and Decree 957 2019 used by the Colombian Association of Micro, Small and Medium Enterprises (ACOPMI) and by Law 905 of 2004 used by the Colombian Confederation of Chambers of Commerce (Confecámaras).

34. <https://www.sdp.gov.co/gestion-territorial/planes-maestros/planes/plan-maestro-de-abastecimiento-y-seguridad-alimentaria>.

Benefits	Reduction of poverty and income inequality Generation of better opportunities for entrepreneurship, SMEs and other vulnerable groups Promoting inclusive finance Generation of opportunities to stimulate the economy and employment post COVID-19.
Alignment with SDGs	1NO POVERTY 2ZERO HUNGER 8DECENT WORK AND ECONOMIC GROWTH 9INDUSTRY, INNOVATION AND INFRASTRUCTURE 10REDUCED INEQUALITIES 11SUSTAINABLE CITIES AND COMMUNITIES

Senior Citizen buying ceramics in a traditional pottery shop.

Eligible Social Category	Empowerment, equality and socioeconomic progress
Eligibility Criteria	Eligible expenses³⁵ include financing and/or refinancing of costs related to: I. Projects and programs to guarantee the human rights of all women and their empowerment in the exercise of these rights, the strengthening of capacities and skills for entrepreneurship, employability for the economic autonomy of women, attention to all types of violence and the protection of women victims of violence and their access to justice. II. Projects and programs to guarantee the effective enjoyment of human rights and the exercise of freedoms for all people who live in or transit through Bogota, preventing exclusion based on ethnicity, religion, social status, politics or sexual orientation, and to assist the population from mixed migratory flows III. Programs and projects to strengthen and consolidate the District Care System³⁶. IV. Programs and projects to guarantee a minimum household income, which reduces the weight of factors affecting the equity of household income³⁷. V. Projects and programs to reduce monetary³⁸ and multidimensional poverty rates in order to guarantee equal opportunities for social, productive and political inclusion³⁹. VI. Programs and projects for training, education, work, health, welfare, autonomy and income that vulnerable groups require in order to exercise their freedoms, maximize their talent, be and exercise their individual autonomy, and enhance their collective action in the community, in particular for mother-heads-of-households, young people in general, Afro-descendant and indigenous peoples, and citizens who survive in conditions of extreme poverty, disability, discrimination or exclusion⁴⁰.

35. For the purposes of this framework, projects and programs in this category focus on vulnerable populations.

36. For example, with existing programs such as: “Manzanas del cuidado” (Apples of care), “Hogares de Paso para Habitante de Calle” (Foster homes for the homeless) or new ones such as: Promotion of formal, equitable and inclusive entrepreneurship.

37. For example, the Guaranteed Minimum Income program or new ones such as: “Better Transfers, More Welfare”.

38. Monetary poverty is defined according to the poverty line established by DANE, while multidimensional poverty includes factors such as education, health and living conditions. Extreme poverty refers to those households that cannot meet their basic food needs. <https://colaboracion.dnp.gov.co/CDT/Prensa/Publicaciones/Publicaci%C3%B3n%20lpm%20deptal.pdf>.

39. For example: The program, Bogota, a city with less poverty.

40. For example: The program, Bogota looks after its people.

Benefits	Reduction of monetary and multidimensional poverty, with emphasis on vulnerable groups Guarantee gender equality, the empowerment of women and other vulnerable groups, the exercise of their rights and participation in the economy Strengthening of democracy Consolidation of a culture of peace, remembrance and tolerance.
Alignment with SDGs	1NO POVERTY 2ZERO HUNGER 3GOOD HEALTH AND WELL-BEING 5GENDER EQUALITY 8DECENT WORK AND ECONOMIC GROWTH 9INDUSTRY, INNOVATION AND INFRASTRUCTURE 10REDUCED INEQUALITIES 16PEACE, JUSTICE AND STRONG INSTITUTIONS

Man working in his workshop with safety goggles looking down sitting in his chair inside the glassware workshop.

Green Eligible Category	Affordable Basic Infrastructure
Eligibility Criteria	Eligible expenses include financing and/or refinancing costs related to: I. Programs and projects that improve the conditions and quality of urban, regional and rural public transport, including infrastructure improvement, interoperability, service reliability and transport supply. For example, this includes public transport providing a social service to vulnerable groups lacking private vehicles, to ensure access to basic social services (health, education, employment). II. Programs and projects focused on providing safer and more efficient spaces for the daily travel of the child population in Bogota, strengthening the civic culture for the mobility system and road safety conditions. For example, the creation and improvement of parks, recreational areas and safe school routes, installation of traffic signs and security cameras. These initiatives seek to reduce the risk of accidents and foster a healthier and safer environment for children. III. Programs and projects to build and conserve public space in urban and rural areas of the Capital District to improve accessibility and promote job creation IV. Programs and projects that carry out interventions to ensure that the urban and rural environment contributes to well-being while enabling the adequate potential development of its inhabitants, for example, by reducing territorial inequalities and imbalances⁴¹.
Benefits	Improvement of urban and rural mobility Improvement of public health and life quality for the inhabitants of the rural and urban areas of Bogota.
Alignment with SDGs	3GOOD HEALTH AND WELL-BEING 9INDUSTRY, INNOVATION AND INFRASTRUCTURE 11SUSTAINABLE CITIES AND COMMUNITIES

41. For example, the program Attention to the Social Deficit for a Dignified Habitat.

Social Eligible Category	Access to education, healthcare, housing and other essential services
Eligibility Criteria	Eligible expenses include financing and/or refinancing of costs related to: I. Programs and projects to increase the quality and supply of public education, reduce inequity, access and permanence gaps that exist in the education system, produce pedagogical transformations, as well as to train and develop reading, writing and oral skills⁴². II. Development of actions and processes for assistance, care, comprehensive reparation and participation for the armed conflict victims; the social appropriation of memory for peace and reconciliation⁴³. III. Programs and projects for sustainable urban revitalization, cultural appreciation and appropriation, recovery and conservation of public space⁴⁴. IV. Programs and projects to improve the health system, promote healthier lifestyles, such as increasing physical activity and sport among citizens in order to help prevent chronic nontransmissible and mental illnesses and the appropriation of public space, reduce maternal mortality and promote the integral development of children⁴⁵. V. Programs and projects aimed at reducing housing insecurity and informality, in urban and rural environments, as well as facilitating the acquisition of and access to housing in its different modalities⁴⁶. VI. Programs and projects aimed at reducing gaps in coverage of public services such as drinking water, sanitation, electricity, education, health and internet connectivity for vulnerable populations, for example, the program: Inclusive and Sustainable Public Services.

42. For example, the program: Comprehensive Early Childhood Care and Education as the Linchpin of Human Potential.

43. For example, the program: Bogota, a Territory of Peace and Reconciliation Where Everyone Can Start Over.

44. For example, the program: Safe and Inclusive Public Spaces.

45. For example, the program: Integrated and Comprehensive Public Health.

46. For example, the construction of housing for low-income families and the remodeling and improvement of existing housing through subsidies and technical assistance to improve conditions of deteriorated housing: Comprehensive Neighborhood Improvement Program and the Intervention Plans for Comprehensive Improvement (PIMI-Habitat).

Benefits	Construction and transformation of public space through sustainable and re-greening models. Improvement of well-being and integral human development Access to affordable housing, especially for vulnerable groups and those living in poverty Promotion of more sustainable and healthy lifestyles Transformation of public education to reduce gaps in access, inequity and quality
Alignment with SDGs	

Woman working outdoors, in the city streets.

Social Eligible Category	Natural disaster risk reduction
Eligibility Criteria	Eligible expenses include the financing and/or refinancing of costs related to: I. Programs and projects aimed at protecting the living environment in high-risk areas⁴⁷ or in contexts of natural hazards⁴⁸. II. Programs and projects aimed at reducing risk, impact, damage or loss of life, the environment, property, infrastructure and general public or private heritage in the city of Bogota.
Benefits	Life and Property Protection Cost Savings Strengthening Resilience Environment Protection Promotion of Sustainable DGevelopment
Alignment with SDGs	13 CLIMATE ACTION  11 SUSTAINABLE CITIES AND COMMUNITIES 

47.

According to IDIGER, around 600,000 inhabitants of Bogota are at risk from flooding, around 250,000 from landslides and around 30,000 from torrential downpours or flash floods.

48.

For example, the District System for Risk Management and Climate Change (SDGR-CC). <https://www.ambientebogota.gov.co/plan-distrital-de-gestion-del-riesgo-y-cambio-climatico-para-bogota-d.c.-2015-2050>.

5.

PROJECT SELECTION AND EVALUATION PROCESS

The process of selecting and evaluating projects eligible for financing under this framework follows the guidelines established by current legislation and protocols relating to the formulation of public investment projects, the Medium-Term Fiscal Framework, the Annual Investment Operational Plan (POAI), and the Budget Draft.

Eligible projects must be previously registered in the Investment Projects Bank. According to Law 152 of 1994, the District Finance Office guarantees the coherence of the budgetary aspects of the POAI with the Annual Budget Agreements on Income and Revenue and Expenditure and Investments, while the District Planning Office is responsible for drawing up the POAI.

The POAI establishes the objectives, programs and projects to be carried out during the current fiscal year, based on the public investment projects formulated by the entities of the Central Administration and the Public Establishments of the Capital District, prioritized for said fiscal year.

The District Planning Office provides guidelines for the formulation of the POAI, ensuring that planned investments are aligned with those priorities established in the District Development Plan (PDD). Figure 4 presents the powers and functions within the public investment cycle of Bogota D.C.

Figure 4. Attributions and Functions within the Public Investment Cycle

District Planning Department

Responsible for leading the drafting of the POAI, in accordance with Article 37 of Law 152 of 1994

It is the central sector entity responsible for directing, designing and developing the guidelines for the formulation and monitoring of district entity projects, in accordance with the District Development Plan and the Land Use Plan.

It provides the technical framework for the elaboration of the POAI of the Capital District in coordination with district entities (policies and guidelines).

District Finance Office

Responsible for ensuring budgetary consistency between the POAI and the Annual Budget Agreements in coordination with the other offices and entities of the District.

District Governing Council

Responsible for approving the POAI in accordance with the regulatory framework established in Law 152 of 1994.

District Entities

Formulate, lead and coordinate the process of preparing and presenting social, sustainable or environmental development projects for the different sectors of the central government, taking into account the objectives of the District Development Plan, the Land Use Plan, and the District’s environmental and social policies, following the guidelines provided by the District Planning Secretariat.

The entities involved in the process of selecting and evaluating the portfolio of projects eligible for financing with thematic bonds are:

- A. District Finance Office. (SDH).
- B. District Planning Office. (SDP).
- C. District Environment Office. (SDA).
- D. District Social Integration Office. (SDIS).
- E. Designated district technical entities.

The project selection and evaluation process is carried out under the joint direction of the District Planning Office and the District Finance Office, in coordination with other entities, as detailed below (Figure 5).

Figure 5. Evaluation and selection of eligible projects

04

Creation of the project portfolio.
Responsible entities: SDH and SDP.

05

Selection and project final approval.

Responsible Entities:
Technical panel 1: Green Projects
Technical panel 2: Social Projects

06

Issuance of the Sustainable Bond.
Responsible Entities: SDH.

Source: Own elaboration.

The steps to follow are described below:

- I. Preliminary selection of investment projects: Projects are identified and evaluated to form a portfolio articulated with the PDD, the registration in the District Bank of Investment Projects. Two work teams are formed to evaluate green and social projects. For social projects, the technical panel will be made up mainly of the SDP, SDH, SDIS and will be accompanied by other entities as required, depending on the objective of the project. For green projects, the technical panel will be made up of the SDP, SDH, SDA, and other entities as required, depending on the eligible green category of the framework.
- II. Criteria Evaluation: Verification that the portfolio of investment projects complies with the criteria and categories established in the Framework. The SDH shall verify that the projects eligible for financing or refinancing have the debt quota source as a financing mechanism and that the budget resources have been committed. The technical committees are responsible for evaluating the environmental and/or social component as appropriate and will ensure that the projects are aligned with chapter 4: Use of Resources, and will urge the other Offices to ensure that they have impact or result indicators, when applicable according to each of the eligible categories.”

With regard to the eligibility of green projects, the SDP and the SDH, in coordination with the SDA, through the Directorate of Planning and Environmental Information Systems (DPSIA) 49, will liaise with the technical areas to ensure that the projects implemented by the entity are aligned with Colombia’s green taxonomy, the Sustainable Bond Reference Framework, the Public Policy on Climate Action Bogota D. C. 2050, the Comprehensive Solid Waste Management Plan, the Bogota Declaration for Sustainable Development, the Bogota D. C. Sustainable Mobility Master Plan, the District Development Plan (PDD), the Bogota D. C. Territorial Planning Plan, the Public Policy for the Management of Biodiversity Conservation, and current environmental regulations. This is with the purpose of ensure that the selected projects comply with the technical eligibility criteria

49. Or whoever takes his place.

established in the Framework, and that they are not classified on the exclusion list.

In the case of projects with a social impact, they will be selected by a working group made up of the SDP, the SDH, the SDIS or the corresponding technical entity, which will evaluate their consistency with the District’s social objectives and policies, as well as their eligibility within the eligible social categories.

- III. Budget Allocation Review: the budget appropriation of the project portfolio is determined, considering whether they have a committed debt capacity for their development in previous or subsequent fiscal years. In the case of previous fiscal years, the use of the budgeted resources is verified in order to ensure their effective allocation. The SDH, by monitoring the budgetary execution of the projects, will verify the use of the resources allocated to the eligible projects.
- IV. Creation of the Project Portfolio: The portfolio of green or social projects subject to financing with thematic (green, social or sustainable) bonds is established, led by the SDH and the SDP.
- V. Project Selection and Final Approval: The projects to be financed with the thematic bonds are selected and approved by the respective technical committees.
- VI. Issuance of Thematic Bonds (green, social or sustainable): The revenues derived from the bond issue will be deposited in the District Single Treasury Account. When the issue is made on the international market in foreign currency, the clearing account will be used. The above is subject to the selected project portfolio being financed in the budget with a debt quota source, both for previous terms and in the current one. Responsible entity: District Finance Office (SDH).

This process guarantees a rigorous selection and transparent management of projects that will be financed through thematic bonds, ensuring their alignment with policies and priorities established for Bogota’s sustainable development.

5.1.
EXCLUSION LIST

The District Finance Office will refrain from financing the following activities with resources generated from the issuance and placement of green bonds under this framework:

1. Failure to comply with the fundamental principles of workers and labor rights⁵⁰.

2. The production or trade of any product or activity considered illegal under the laws or regulations of the Republic of Colombia or international conventions and agreements or subject to international prohibitions.

3. Manufacture or trafficking of arms and ammunition.

4. Production or marketing of alcoholic beverages (excluding beer, wine and beverages with a Colombian designation of origin).

5. Tobacco production or trade.

6. Gambling, casinos and other similar activities.

7. Manufacture or sale of radioactive materials, except the purchase of medical equipment, quality control equipment (measurement) and any equipment for which it can be shown that
- the source of radioactivity will be insignificant or will be adequately covered.

8. Production, trade or use of non-agglomerated asbestos fibers⁵¹.

9. Production or trade of wood products or other forest products from forests without a corresponding forest management plan⁵².

10. Forestry projects or operations in fragile or environmentally sensitive areas that do not have a forestry management plan

11. Manufacture or sale of products with Polychlorinated Biphenyls

12. Production, trade, storage or transportation of significant amounts of dangerous chemical products that do not comply with Mexican regulations.

13. Cross-border waste trade, except non-hazardous waste for recycling⁵³.

50. The Fundamental Principles and Rights at Work entail: i) freedom of association and the effective recognition of the right to collective bargaining; ii) the prohibition of all forms of forced or compulsory labor; iii) the prohibition of child labor, including, without limitation, the prohibition of persons under the age of 18 from working in hazardous conditions (including construction activities), from performing night work and are declared fit to work based on a medical examination; and iv) the elimination of discrimination in respect of employment and occupation, where discrimination is defined as any distinction, exclusion or preference based on race, color, sex, religion, political opinion, or national or social origin (International Labor Organization, <http://www.ilo.org>).

51. This restriction does not apply to purchase or use of fiber cement boards with an asbestos content of less than 20%.

52. The Plan must comply with current regulations and the provisions of Colombia’s green taxonomy.

53. Defined by the Basel Convention (<http://www.basel.int>).

54. Pharmaceutical products that are being progressively withdrawn from the market or that have been banned, according to the United Nations publication “Banned Products: Consolidated List of Products Whose Consumption or Sale Have Been Banned, Withdrawn, Subject to Strict Restrictions, or Have Not Been Approved by Governments” (latest version from 2001, in English: www.who.int/medicines/library/qsm/edm-qsm-2001-3/edm-qsm-2001_3.pdf).

14. Production of or trade in pharmaceutical specialties subject to international phase-out or prohibition⁵⁴.

15. Production of or trade in pesticides or herbicides subject to international phase-out or prohibition and persistent organic pollutants (POPs)⁵⁵.

16. Production or trade of ozone-depleting substances subject to international phase-out⁵⁶.

17. Driftnet fishing in marine environments with nets longer than 2.5 km.

18. Production or activities that violate indigenous peoples’ land rights or land that has been reclaimed by allocation, without the full documented consent of these peoples.
19. Production or commercialization of products or activities considered illegal according to local regulations or international conventions and agreements, such as wildlife or products regulated by the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES⁵⁷).

20. Projects that involve violations of national and international conventions and treaties regarding indigenous populations and native peoples⁵⁸.

21. For the purposes of this reference framework, the financing of projects with activities based on fossil fuels is excluded.

5.2.
ENVIRONMENTAL AND SOCIAL RISK
MANAGEMENT

Projects financed under this framework will adhere to the regulatory framework and local policies relevant to their activity. Environmental studies will be carried out and the required measures will be implemented based on current Colombian regulations, as well as the reference terms for licensing, established by the National Authority of Environmental Licenses (ANLA), or according to the conditions and permits set by the respective environmental authorities and the Regional Autonomous Corporations (CAR). The established guidelines will be taken into account by Colombia’s Green Taxonomy

55. Defined in the international convention on the reduction and elimination of persistent organic pollutants (POPs; September 1999); currently include the pesticides aldrin, chlordane, dieldrin, endrin, heptachlor, mirex and toxaphene, as well as the industrial chemical chlorobenzene (www.pops.int).

56. Ozone-depleting substances (ODS) are chemical compounds that react with stratospheric ozone and deplete it, producing the aforementioned “ozone holes”. The Montreal Protocol includes a list of these substances and the dates set as targets for their reduction and withdrawal from the market. Some of the chemical compounds regulated by the Montreal Protocol are aerosols, refrigerants, foaming agents, solvents and fire protection agents (<https://www.unep.org/ozone/montreal.shtml>).

57. Convention on International Trade in Endangered Species of Wild Fauna and Flora, <https://www.cites.org/>.

58. Supreme Court Ruling or Ruling of the Inter-American Court.

6. PROCEEDS MANAGEMENT

Proceeds Allocation: The District Finance Office will allocate an amount equivalent to the funds from issues made under this framework for the financing or refinancing of investments and expenses in three main categories: recent investments and expenses (up to three previous fiscal years), investments and expenses in the current fiscal year, and future investments and expenses. These investments and expenses must have budgetary resources committed with a debt quota source and have been chosen within the portfolio of the issue, remaining within the eligible categories described in chapter 4: Use of Resources of this framework.

In order to ensure that proceeds are allocated to eligible projects, budget traceability is ensured through the coding used in the POAI, which establishes the investment budget requirements for the projects and forms an integral part of the budget agreement for each term. The SDH, through the District Budget Directorate, makes the budget allocation and commitment in accordance with the sources of funding allocated to each project.

With the budgetary resources committed, the different entities in charge of project execution carry out the Annual Cash Plan, through which they program the resource needs to execute the payments, the latter are centralized in the District Treasury Directorate, thus maintaining the traceability of the transfers made for the monitoring of budget execution.

Alignment with changes in government: To ensure consistency with changes in the administration and their respective District Development Plans (DDP), projects using resources from previous fiscal years must have been incorporated into the current DDP and be included in the Operational Annual Investment Plan (POAI) for the corresponding fiscal year.

Management of income pending allocation: In the event that the full allocation of resources is not made in the 36 months following each bond issue, or as soon as possible, the income from the issues will be managed by the District Finance Office in the Single District Account. This will be carried out in accordance with the internal liquidity policy, in accordance with Decree 111 of 1996 and all applicable regulations that complement or modify it. The resources administered in the Single District Account that make up the Cash Unit, as established in the internal liquidity policy and corresponding regulations.

Reallocation of ineligible resources: Reallocation of ineligible resources: in the event that the financing or expenses initially included in a bond issue no longer meet the eligibility criteria due to changes in their nature or implementation, the expenses related to the specific bond will not be considered. The District Finance Office will endeavor to reallocate these resources to other eligible expenses that meet the eligibility criteria described in Chapter 4: Use of Resources.

7. REPORT AND EXTERNAL REVIEW

The District Finance Office, through the Sub-Directorate for Financing with other Entities⁵⁹, will prepare and publish for the investment community a resource allocation report and an impact report according to the frequency defined below for all bonds issued under this framework. Both reports will be published on the Secretariat’s website: <https://www.haciendabogota.gov.co/> and on the Relevant Information Page of the RNVE of the Financial Superintendence

of Colombia: [https:// www.superfinanciera.gov.co/SIMEV2/rnve](https://www.superfinanciera.gov.co/SIMEV2/rnve) In order to prepare the reports, the District Finance Office will coordinate mainly with the District Planning Office in order to compile the information regarding the expected environmental and social impact of the projects according to the associated PDD goals, as described in Figure 6.

Figure 6. Preparation of resource allocation and impact reports

59. Or whoever takes his place.

The steps to follow are described below:

1. Information Request to Relevant Entities: the SDH, through the Planning Advisory Office, requests the entities in charge of executing the project to provide an analysis of the impact on the indicators of the goals of the District Development Plan in relation to green and/or social issues. his analysis should be aligned with the indicators established in the SEGPLAN system (Monitoring the Action Plan of the District Development Plan). SEGPLAN will identify the magnitude and resources of each project and its goals/indicators.
2. Information Organization and Coordination: The SDH and the SDP will work together to organize the information received by the different technical entities. This involves compiling, reviewing and structuring related with the impact of the indicators of the goals associated with each project.
3. Preparation of the Impact Allocation Report: Based on the information compiled and organized, the SDH and the SDP will prepare the impact allocation report. This document details how the Thematic Bond funds were allocated to specific projects, considering their impact on the indicators of the goals associated with each project.
4. Report Validation: Once the report has been drawn up, the SDH and the SDP validate it with the entities involved in the execution of the projects according to the impact of the indicators of the goals associated with each project. This validation ensures the integrity and accuracy of the information presented in the report.
5. Report Publication: Finally, once the report has been validated and approved by the relevant entities, the SDH will proceed to publish it. This involves making it accessible to the general public, ensuring transparency in the process of allocating Thematic Bond funds and the impact these will have on the projects financed.

The entity in charge of each project chosen to be financed with the instruments of the present Framework will be responsible for the execution of the resources once they are incorporated into its budget. Therefore, for its control, the entity will carry out the respective quarterly monitoring in the SEGPLAN system, which will generate a report that will allow for the analysis of the fulfillment of the PDD’s goals, which will be delivered to the District Finance Office.

Panoramic view of buildings and La Paz neighborhood in Bogota, Colombia.

7.1.
USE OF PROCEEDS
REPORT

The District Finance Office will provide, through this report, information on the allocation of resources from its bonds until the full allocation of funds, including:

- » A brief description of projects and amounts allocated;
- » Percentage of income allocated by project or program;
- » Percentage of income allocated for financing and/or refinancing;

- » The remaining balance of unallocated income.

In the event that confidentiality agreements, competition considerations, or a large number of underlying projects limit the amount of detail that can be made available, the SDH will present the information in generic terms or on the basis of an aggregate portfolio (for example, the percentage allocated to certain categories of projects).

7.2.
IMPACT REPORT

The District Finance Office is committed to making every effort to publish an annual report until the full allocation of funds in line with the ICMA Harmonized Framework for Impact Reporting.

The SDH will consolidate the information on the District Development Plan targets that the project executing entities must report in the SEGPLAN system, which includes the projects and expenses financed through the bond. Provided that the information is available, the impact report may include:

- » The impact of the indicators of the targets associated with each environmental or social category project and expenditure in accordance with the fulfillment of the targets and indicators of the District Development Plan.

- » The methodology and underlying assumptions used to estimate the impact indicators to be disclosed.

At least one indicator will be reported for each eligible category. For impact indicators, Table 6 and Table 7 will be taken as a reference. Other relevant indicators may be included in each project, if applicable.

The impact will be consistent with the current District Development Plan. For the report, the Government of Bogota D. C. **may report one or more of the goals of the District Development Plan per eligible category.**

Table 6. Green impact targets of the District Development Plan

Eligible Green Category	District Development Plan Goal
Sustainable Waste Management, Pollution Control and Prevention	» Weighted average concentration of particulate matter PM 10 or PM 2.5 in a city
	» Number of properly formulated and implemented pilot projects for the use and treatment of waste for energy recovery in a reducing environment or biological processes, which guarantee at least 10% treatment of non-recoverable waste.
	» Percentage of progress in the implementation of civic culture strategy to promote separation at source, reuse, recycling, recovery and utilization of ordinary organic and inorganic waste.
	» Percentage of clandestine waste and critical points collected and transported.
Sustainable and Integrated Water and Wastewater Management	» Kilometers of river with acceptable, good or excellent quality in the Capital District.
	» Number of diagnoses for the recovery of the ecological flow of wetlands (original indicator of the agreement is hectares for conservation in supply basins and other areas of strategic importance for the Aqueduct and Sewerage Company of Bogota D. C.).
	» Number of consolidated and implemented environmental monitoring, evaluation, control and follow-up programs for water resources.
	» Percentage of progress in the process of construction, maintenance and operation of the Canoas wastewater treatment plant (WWTP) for the treatment of up to 16m3/s.
	» Percentage of storm sewerage coverage.
	» Percentage of drinking water supply system providers in rural areas offering low-risk quality water according to IRCA

Eligible Green Category	District Development Plan Goal
Clean Transportation	» Kilometers of cycle route preserved, built.
	» Kilometers of green corridor of the seventh race executed.
	» Number of bicycle parking spaces implemented, managed.
	» Number of zero and low emission vehicles in Bogota’s vehicle fleet.
	» Percentage of progress in the PLMB project cycle - Section 1.
Land use, Conservation and Sustainable Management of Natural Resources	» Percentage of completion of the designs and works required in the project called the Alameda Medio Milenio Cycle.
	» Number of new hectares restored, rehabilitated or recovered.
	» Percentage of progress in the fulfillment of the projects of the management plan of the Area of Public-Priority Occupation (AOPP) of the adaptation strip of Eastern Hills under the competence of the SDA.
	» Number of prioritized hectares with maintenance for ecological recovery, rehabilitation or restoration in the main ecological structure and areas of environmental interest.
	» Percentage of progress in the implementation of an incentive program for rural environmental conservation.
	» Percentage of rural localities with measures from the action plan of the Public Policy on Rurality (CONPES D. C. 41 of 2023).
	» Number of hectares recovered from current and future illegal occupations.
	» Number of new hectares with conservation or acquisition strategies implemented to increase the supply of environmental and ecosystem services.

Eligible Green Category	District Development Plan Goal
Land use, Conservation and Sustainable Management of Natural Resources	» Number of new hectares with conservation or acquisition strategies implemented to increase the supply of environmental and ecosystem services.
	» Percentage of protected areas (PEDEM and RDH) and other areas of environmental interest through the development of management actions.
	» Square meters of gardens maintained/planted in public spaces.
	» Number of trees planted/maintained with ecological recovery criteria in rural areas/in urban areas of Bogota D. C.
	» Number of environmental corridors constructed.
	» Number of new hectares with conservation or acquisition strategies implemented to increase the supply of environmental and ecosystem services.
	» Number of ecological connectivity projects in implementation or follow-up.
	» Number of networks, groups, collectives or organizations linked to environmental management strategies.
Cars on the highway	

Table 7. Social impact goals of the District Development Plan

Social Eligible Category	Impact Goal
Access to Education, Healthcare, Housing and other Essential Services	» Financial alternatives or housing schemes designed and implemented.
	» Number of beneficiaries of comprehensive lifelong learning processes with an emphasis on art and culture.
	» Number of sports strategies implemented.
	» Number of hectares of usable land managed for the development of social housing and complementary uses.
	» Number of households benefiting from Mi Ahorro Mi Hogar (My Savings My Home) program.
	» Number of young people trained in mediation, tolerance, empathy, self-control and emotional management skills to prevent their involvement in crime, violence and substance abuse.
	» Number of young people linked to opportunity generation strategies.
	» Mental health program implemented.
	» Proportion of health incidents managed within the framework of the Medical Emergency System (SEM).
Empowerment, Equality and Socioeconomic Progress	» Level of implementation of the inter-institutional management strategy for the social mobilization and capacity training of adults identified as being in hidden poverty.
	» Level of implementation of the social inclusion model for people from the LGBTI sectors.
	» Number of families in situations of poverty, vulnerability or social fragility who have benefited from a strategy of social inclusion and economic support.

Social Eligible Category	Impact Goal
Empowerment, Equality and Socioeconomic Progress	» Number of women involved in information processes, awareness-raising and campaigns to publicize their rights.
	» Number of children and adolescents who are victims of and affected by the armed conflict and who are assisted by the Dreamcatcher Strategy.
	» Percentage of progress in design and monitoring of the entrepreneurship and employability strategy for women’s economic autonomy.
	» Percentage of strengthened spaces for differentiated care and participation for black, Afro-Colombian, Raizal, Palenquero, indigenous and Gypsy communities.
	» Percentage of resources allocated to the Family Development Fund (FDL) for the guaranteed minimum income of vulnerable populations.
Job creation and programs aimed at preventing and/or alleviating unemployment	» Lifestyle ventures and MSMEs with access to financing.
	» Number of strengthened Food Supply System actors.
	» Number of MSMEs strengthened in digital transformation processes based on ICT appropriation and use.
	» Number of new markets / commercial segments opened for 100 companies.
	» Number of tourism service providers incorporated into the sustainable tourism program, including emphasis on biosecurity.
	» Number of designed and promoted programs for value chain strengthening.
	» Number of agro-ecological routes created and consolidated.
	» Percentage of implementation of the program promoted for the 24/7 productive Bogota.

Social Eligible Category	Impact Goal
Affordable Basic Infrastructure	» Number of overhead cables implemented and structured (only structured ones are measured).
	» Number of strategies implemented to improve the quality of regional urban public transport.
	» Number of funding sources implemented for the Mobility sector.
Natural Disaster Risk Reduction	» Number of families benefitting from the resettlement program.
	» Number of mitigation projects for risk reduction and adaptation to climate change.
	» Percentage of progress in the UAECOB modernization and sustainability program for effective response in emergency and disaster care.

Sunny day in Bogota, Colombia

8. EXTERNAL REVIEW

The District Finance Office of Bogota D. C. will obtain a second party opinion (SPO) on this Framework to ensure its alignment with best practices in the bond market. If, in the future, any of the sections of the Sustainable Bond Framework are modified, the Office undertakes to obtain a new second party opinion to ensure the transparency and traceability of bond issues.

Annex I. Alignment of categories eligible for the 2020-2024 PDD

Social Eligible Category	Linking Program Bogota D. C. Plan
Job creation and programs aimed at preventing and/or alleviating unemployment	» Bogota, an enterprising and innovative region » Bogota, a productive and competitive region » Bogota and the surrounding region, the best destination to visit » Closing the gap for productive inclusion between urban and rural areas
Affordable Basic Infrastructure	» Safe, sustainable and accessible mobility » Subsidies and transfers for equity » Decent housing and environments in urban and rural areas
Access to education, healthcare, housing and other essential services	» Bogota, an enterprising and innovative region » Bogota: a territory of peace and comprehensive care for the victims of the armed conflict » Bogota: a benchmark in culture, sport, recreation and physical activity, with parks for development and health » Cultural change for climate crisis management » Creation and daily life: Citizen appropriation of art, culture and heritage, for cultural democracy » Early education: Solid foundations for life » Education for all: access and retention with equity and emphasis on rural education » Comprehensive training: more and better time in schools » Young people with abilities: Life project for citizenship, innovation and work in the 21st century » Pollution management and prevention » More trees, larger and better public spaces » Improved management of health institutions

Social Eligible Category	Linking Program Bogota D. C. Plan
Access to Education, Healthcare, Housing and other Essential Services	» District Plan for Reading, Writing and Oral Communication: Reading for Life » Prevention and care for early maternity » Prevention and changes to improve public health » Protection and appreciation of the tangible and intangible heritage in Bogota and the region » Urban revitalization for competitiveness » Health for life and well-being » Health and well-being for children » Subsidies and transfers for equity » Pedagogical transformation and improvement of educational management is with the teachers » Decent housing and environments in urban and rural areas
Natural Disaster Risk Reduction	» Settlements and protective environments » Efficiency in emergency care
Job creation and programs aimed at preventing and/or alleviating unemployment	» Pollution Management and Prevention » Metro Network » Safe, Sustainable and Accessible Mobility
Empowerment, equity and socioeconomic advancement	» Eco-efficiency, recycling, waste management and inclusion of the recycling population » Changing our lifestyle to make Bogota greener and adapting to and mitigating climate crisis » Pollution management and prevention
Affordable Basic Infrastructure	» Cultural change for climate crisis management » Bogota, protector of its natural resources » More trees, larger and better public spaces » Bogota, entrepreneurial and innovative region » Bogota, animal protector » Rural Bogota
Access to Education, Healthcare, Housing and other Essential Services	» Management and sanitation of bodies of water » » Provision and improvement of public services
Natural disaster risk reduction	» Public Policy on Climate Action Bogota 2050 (CONPES D. C. 31 of 2023).
